SENAB

Färgmarkeringar och/eller symboler för hållbara alternativ i prislistan:

Mörkgrön markering eller symbol

Miljömärkt produkt – Möbler där hela den sammansatta varan har en typ 1 miljömärkning enligt ISO 14024 med Svanen, Möbelfakta, EU Ecolabel eller annan likvärdig märkning.

Ljusgrön markering eller symbol

Hållbarhetsmärkt produkt eller beståndsdel – Möbler där hela eller delar av den sammansatta varan är hållbarhetsmärkt, exempelvis med FSC, EU Ecolabel eller OEKO-TEX®. Leverantören ska kunna ge mer detaljerad information om vilka delar eller variationer som är hållbarhetsmärkta vid begäran.

Orange markering eller symbol

Klimatberäknad produkt – Produkt med dokumenterad miljövarudeklaration (EPD) enligt ISO 14025.

Lila markering eller symbol

Produkt med återvunnet eller förnybart material (enligt definitionerna i ISO 14021). Leverantören ska kunna ge information om andel (%) återvunnet och/eller förnybart (biobaserat) vid begäran. Märkning av återvinningsbart material utgår.

Blå markering eller symbol

Demonterbar produkt – Produkt som är demonterbar till olika komponenter och beståndsdelar som i första hand möjliggör återbruk och i andra hand materialåtervinning när produkten nått sin fulla livslängd. Produkten ska vara designad för renovering, det vill säga att det ska vara enkelt att reparera och byta ut moduler, komponenter och beståndsdelar som slits över tid. Exempelvis ska ytskikt, som bordsskivor, textil och stoppning kunna tas isär, avlägsnas och ersättas med hjälp av vanligt förekommande manuella verktyg, ej specialverktyg. Enklare reparationer och utbytesarbeten ska kunna utföras av en lekman. Om det krävs fackmanakunskap för mer avancerade arbeten ska det framgå av anvisningarna som leverantören ska kunna ge vid begäran. Anvisningarna ska innehålla en sprängskiss, steg för steg beskrivning inklusive vilka verktyg som krävs samt hur möbelns ingående delar bör källsorteras.

about the company

hand-crafted for generations

We dream of beauty before creating each product.

For us wood bending is all about strength.

A product that is both strong and beautiful is timeless. It passes from generation to generation as our craft.

Our ethos is to conduct ourselves in an honest and friendly manner for the benefit of people and nature.

Milan Dostalík
CEO

Our products are made by people using traditional wood bending technology. Since 1861 the art of wood bending and the love of the craft have been passed from one generation to another in Bystrice pod Hostynem. In more than 160 years, six generations of craftsmen have worked in the factory and they have made their indelible mark in its history. Our current contribution to the historic milestones

are products using split solid wood bent into opposite directions.

If you have chosen TON products, the chances are that you not only appreciate high quality handcraft but you are also a lover of design and timeless beauty. We are glad to see that by making this decision you have joined the group of extraordinary friends of TON.

Awards

Our love of wood is not rewarded only by the long-term fruitful production and customer satisfaction. Our ongoing effort to continuously create new products to become integral parts of our custom-

ers' interiors is often also appreciated by design experts. This is attested by a number of awards given to our products.

how a chair is made

Timber drying

1 We receive squared timber in the warehouse, which is stored and dried to the required moisture level. The drying process is affected by the initial moisture content, thickness of pieces, type of wood or method of use in the production. It may take up to three months before the required moisture content is achieved.

1

Steaming

2 The most frequently used type of wood for bentwood production is beech, which is placed in saturated steam at around 100 °C. Steaming provides the wood with its typical pink shade. The time spent in steam depends on the diameter of the respective wooden rods.

3

Bending process

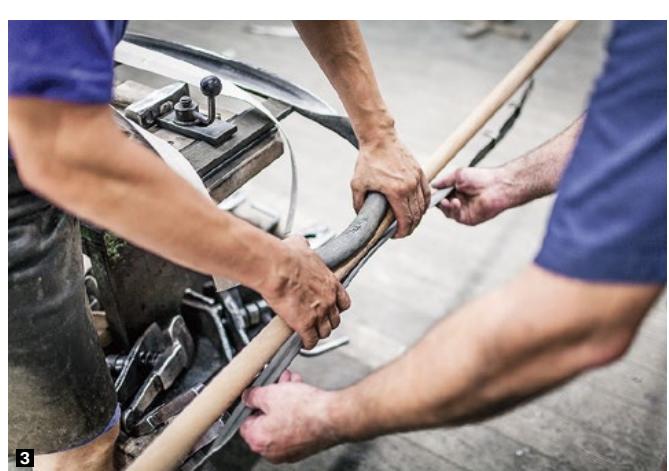

3 In the manual bending process, benders fasten a wooden rod into a mould and attach a special support flange before gradually bending both ends of the rod around the mould. The wood structure does not suffer any damage through this process, and remains incredibly strong in spite of its changed shape. It may look simple, but it is a science. Learning how to bend wood manually generally takes about a year.

2

3

Staining and lacquering

4 Individual chair parts and partially assembled chairs travel to the staining area to be submerged in vats of various colour stains. If a customer prefers natural wood colour, the product is finished with lacquer or oil depending on to the type of wood. In addition to a finish with a stain, lacquer or oil, products can also be painted in any RAL colour shade.

Assembly

5 Individual parts are assembled manually at a special work station. Each chair has its own assembly procedure. For example, chair no. 14 consists of 6 parts and experienced workers are able to assemble it in 2 minutes.

Finishing

6 Lacquering is one of the last steps of the production process. Lacquering is done by skilful hands with each pair possessing a unique feel. Hand finishing gives each product an original feel and creates the magic behind Antique and Gradient finishes. An alternative to lacquer is oil. Applied only to the surface, oil preserves the wood structure better than other finishes. The absorbed oil protects wood fibres and brings out their individual beauty.

Upholstery

7 Every upholstered TON product has a predetermined foam component, making it as comfortable as possible to sit on. Parts from injection moulds are used for more complex shapes. We offer our most demanding customers products with a system of springs in the seat.

Testing

8 Quality is our top priority. Our products are rigorously checked throughout the production process. In addition, they are tested under European standard EN 16139 Furniture – Strength, Durability and Safety. A special machine is used to test chairs. It repeatedly subjects them to the prescribed pressure on the seat, backrest or armrests. All chairs can bear a load of ± 115 kg without any problems. The test results for all of our products are displayed on our website. Woven chairs (with and without a reinforcement mesh) are also tested with a load of 110kg. Tables are tested in certified external testing laboratories under the Czech and European standards ČSN EN 12521 Furniture – Strength, Durability and Safety – Requirements for domestic tables and ČSN EN 15372 Furniture – Strength, Durability and Safety – Requirements for non-domestic tables. Where no official testing method exists, our products are subjected to our own internal tests.

! Considering the continuous development of our products, we reserve the right to make changes in their design, used materials, structure and applied technology in order to improve their utility or appearance.

! The buyer should use the furniture in accordance with Furniture care & maintenance instructions, which can be found on our websites or at the seller's. Responsibility for defects and quality warranty does not cover wear and tear of the product caused by normal use.

Warranty

We provide an extended warranty of five years from delivery for all products marketed under the TON trademark, unless the sales contract states otherwise. If the product includes a cane weave, the warranty of two years applies on the cane part only.

Ecology

TON's entire production process is suffused with respect and consideration for the natural materials, energies and other raw components, and particularly for the human work that goes into it. Our efforts to work in harmony with nature have been crowned by ISO 14001:2015 certification in

environmental management. We make furniture and furniture components from wood certified by the PEFC programme. We comply with the highest ecological, social and ethical standards when we harvest our wood.

ISO 14001:2015

ISO 9001:2015

how to use the price list

How to use the price list

Information about possible execution of the products and the price section itself are divided into thematic parts. The individual prices, additional charges, dimensions and options are customised for each product number.

We believe that this arrangement will help you specify and choose a product so that it fully corresponds to your ideas and requirements.

Product number

The product number distinguishes individual executions of our products on the basic level and facilitates communication during the processing of orders. In the sales documents, the product number is supplemented with the number of the

variant with coded executions, which the customer chooses according to his/her requirements (the type of wood, colour, upholstery, glides, etc.). For most products, the product number is composed according to the following key:

■ Seating furniture

Type of furniture

3 seating furniture

Subgroup

1 chairs
2 armchairs
3 children's chairs
5 revolving and rocking armchairs
6 fixed armchairs
7 stools and barstools
8 benches
S bench modular system

Product execution

1 veneered
3 upholstered
4 additional upholstery – backrest
5 cane
6 combination (e.g. veneer seat, cane backrest)
7 combination (e.g. upholstered seat, cane backrest)

Example:

Model

Moritz

Model number

323 623

3 - seating furniture / 2 - armchair /
3 - upholstered / 623 Moritz

■ Tables and table top

Type of furniture

4 complete table
9 table top

Table top material

B multiplex
D veneered top + veneered edge
F veneered MDF top
M solid wood top
N veneered top + solid wood edge
U multiplex top + veneered surface
Y multiplex top + HPL surface
Z multiplex top + nanolaminate surface

Table top thickness

1 18 mm
5 25 mm
6 28 mm
8 38 mm
C 35 mm
E 33 mm
G 12 mm
I 13mm
J 20 mm

Example:

Model

Jylland

Model number

4M5 476

4 - complete table / M - solid wood top /
5 - thickness 25 mm / 476 Jylland

Prices and technical specifications

Product price and surcharges

Listed prices are in € (VAT not included). Prices include products finished in standard colours and any type of glides. Surcharges are added to the given price category according to the product execution. If the price already contains the execution subjected to a surcharge, the surcharge is marked by * instead. Prices do not include freight costs for deliveries from our premises or TON stores to the customer.

Dimensions of the products

The given dimensions and weights of the products are standardized. The heights do not include glides. Because of the high proportion of manual processing and the natural character of the material, we reserve the right to dimensional variations to the specified dimension tolerances.

Packaging

Our products are mostly delivered assembled. This does not apply to tables and certain types of benches, which are delivered in parts for safer handling.

The products are packed in cardboard packaging. Inside, they are usually further protected by packaging material to eliminate damage during transport or storage. The cardboard is purchased in conformity with the international FEFCO standard, with the emphasis on strength parameters (especially pressure on the edge and resistance to side pressure).

! If product is returned to TON a.s. for claim etc., it must be packed in the same manner as it was dispatched from the factory. Defects caused during transportation due to insufficient protection may be refused in the claim procedure!

! Upon your request, customised quotation can be made to include product installation and removal of packaging (white glove delivery). This service is offered within Europe.

Volume

Number in m³ represents an approximate average volume taken up by a single piece of product in cargo space of a transport vehicle.

Consumption of fabric and artificial leather

Consumption is indicated in running meters per 1 product and is calculated for material width 1.4 m for orders in excess of 10 pieces.

Consumption of leather

Consumption per 1 product is given in square meters.

Sample books

All colour illustrations of wood, textiles and other materials in all our printed brochures are for orientation purposes only. Even when making selection from physical samples, it is necessary to bear in

mind that natural materials in particular (wood, leather) may absorb finishing materials unevenly. In your orders, please specify the products' execution by using our internal codes.

Validity of 2023 price list

The 2023 price list, in printed and electronic version, is valid from 28/3/2023 until the new price lists is released. It replaces any previous price lists. The seller reserves the right to change the prices given here at any time, and is under no obligation to inform third parties of any changes.

These prices are therefore not guaranteed and you should always ask the seller for the current prices in advance. It is to be used for orders received at this time, unless otherwise stated in the purchase agreement. TON is not responsible for typographical or print errors.

and accessories**

wood, colours, surface finishes

Wood is a fascinating material that is beautiful and pleasing both to the eye and to the touch; it has a characteristic smell, texture and colour, and is synonymous with a safe approach to the environment. Wood is a renewable resource, does not pose any danger to human health and is no burden to the environment – not during its processing, while the products are used, nor after they have reached the end of their life. By planting new trees, their life cycle starts again. Unlike modern materials, wood can age and acquires a unique maturity and patina over the course of time. By suitable care, wood can be supported in this process. Too low or too high air humidity or temperature adds to the wood's susceptibility to deformation, cracking or discolouring. See our Furniture care & maintenance manual to learn how to take care of the wooden parts of your furniture.

During the manufacturing process, deviations in shape occur, especially when assembling manu-

ally bent parts. To account for this, a dimensional tolerance of ± 2 cm is specified for the spacing of legs of all bent products.

■ PEFC

PEFC (Programme for the Endorsement of Forest Certification) is a non-governmental, non-profit organisation which was founded in 1999 in Geneva. It's an umbrella organisation of several autonomous national certification systems, whose scope protects more than two-thirds of forests worldwide. The PEFC certification system was created to protect forests. Its purpose is to preserve existing forest vegetation, plant new forests, forest management with respect to natural forest eco-systems and mainly to prevent devastation of forests. By labelling a product with the PEFC logo and our certificate number we confirm to our customers that we make products from wood which is acquired legally with support of sustainable forest management.

! Click on this [link](#) for detailed photographs.

Texture, colouring and other properties of wood

■ Wood texture

Texture is the wood's natural pattern and is unique for each type of wood. The texture is determined by colour, lustre, the way the cut is made, and anatomical structure. Deciduous trees have a more complex anatomical structure, due to which we can see with the naked eye annual rings, pores, pith rays, knots, etc. For example, healthy small knots are valued for their decorative appeal. Knots develop in places where new or dead branches are covered by wood. A healthy knot is darker than the surrounding wood and does not diminish the wood quality. Oak differs from other woods by its texture, especially by visible pith rays occurring in a radial (central) cross-section in the form of small, differently coloured spots. These are called "mirrors" and are an evidence of genuine solid oak. In a tangential cut, the texture creates an interesting figured pattern.

Manual bending of wood may create larger or smaller cracks in the wood surface. They are known as superficial splits. They occur mainly when bending wood into large angles and are

caused by the run of the wood fibres. If the direction of the wood grain does not match the bending direction, the wood cracks on the outer side due to high tension inside the material. The bent parts are then carefully checked to ensure that the extent of the split does not compromise their strength or further processing. Superficial cracks can be repaired by gluing to prevent their re-opening. After thorough sanding, the surface becomes smooth and monolithic again. Cracks repaired in this way give the surface a new dimension because they complement the wood pattern with their characteristic shape of the letter 'v'.

■ Wood colour

Every tree has its typical colouring determined by climatic conditions and the combination of substances in the cell walls. Change in wood colouring caused by sunshine and oxidation is a natural feature of this material. Wood of lighter trees darkens and greys and by contrast wood of darker trees lightens.

! Wood colouring is also affected by the way it is processed. Before being bent, wooden rods are first steamed for up to several hours. Steaming gives beech wood its typical pinkish colour, the intensity of which differs depending on how long the wood is left in the steam. This phenomenon can be observed when light stains are applied to the wood. The logs are also steamed when making veneer, which changes the wood's properties. The veneer then reacts to stains differently than solid wood. The resulting shade of veneered and solid wood parts then might differ not only due to different production processes, but also due to the effect of UV radiation when the product is used.

! Each beech wood component reacts to selected technology in different ways. This natural property causes variation in component colour finish. Surface finishing with oil highlights these nuances. The colour aspect of independent wood components will even out within a few months in response to light and oxygen effects.

Wood grain

Mirrors

Knots

Cracks

Beech / Oil

Natural wood finish

The natural wood finish is not modified in any way by staining or other agents during the production process. According to the type of wood, the surface is only finished with transparent lacquer or oil, thus naturally highlighting the wood texture. The execution of products with a natural wood colour is denoted as Natural. There is no surcharge for Natural wood finish.

Beech / Beech is among the best known and most commonly used deciduous trees. Beech wood is light to pinkish in colour. Beech wood texture is not very distinctive because there is not much difference between the colour of spring and summer wood (so called annual rings). The wood is hard, relatively strong, less elastic, homogeneous and dense.

Oak / Oak has been one of the most sought-after materials for centuries. Its core is relatively wide, evenly coloured, brownish with grey or yellowish tinges. The wood is strong, hard and very durable. It is the most resilient material against

weather changes and fluctuations of wet and dry periods.

Ash / Ash is white to yellowish in colour, the white is of a cream tinge; in contrast, the core is dark brown. Its distinct annual rings create a beautiful pattern, which was used in inlays in the past. The wood is strong, hard, resilient and very elastic, therefore it is also suited for making skis, sledges, sporting equipment and bannisters, as well as furniture.

American walnut / American walnut is native to North America and was brought to Europe in the 17th century. It is of dark brown colour with lighter strips and spots of purple tinge. Thanks to its colouring, it is ideal as a substitute in furniture manufacture for more expensive dark wood. American walnut is a hard, strong but relatively light wood from the temperate zone. It is easy to process and its surface shows a beautiful gloss and colouring, especially when treated with oil.

Surface finish

Lacquered surface (beech, oak, ash)

The standard finish for our chairs is water-based clear lacquer. UV protection in the lacquer layer slows down natural oxidation changes in the wood colouring. The surface is resilient to the accumulation of dirt and is easy to maintain. According to DIN 4102 Part 1, the transparent lacquer is classified under class B1 in combustibility tests on wooden furniture.

Oil-treated surface (beech, oak, American walnut)

The clear base of natural oils and waxes creates a matt protective film on the wood surface which does not crack and does not peel, and yet allows the wood to breathe. Minor damages on surfaces treated this way can be easily repaired. Oil layer is applied directly to the machined raw surface which is not treated by any colour before being oiled. The oil brings out the wood's natural colour. This effect can be best observed on American walnut, which we therefore recommend to finish exclusively with oil. With oil, we also finish the products from unstained oak and beech.

To renovate oiled surfaces, we recommend a special kit, which you will find in the price list under the name Carebox and the identification code CB0004.

How to proceed with oiling can also be found in the video tutorials on our website.

Stains

Stains may be used to match beech, oak or ash products to the surroundings. Staining does not affect the wood structure and most colours do not suppress the wood pattern, either. On the contrary, wood as a natural material absorbs colours differently and for this reason the surface is characterised

by lighter or darker places. The colour result is also affected by the initial range of colour of individual woody plants (see illustration photo). Stains are applied by either immersion or spraying. The surface is then finished only with transparent lacquer. There is no surcharge for stain colour finishes.

! The texture in the picture below shows beech. The colour finishes are for illustration purposes only.

Pigment finishes

The natural colour and texture of wood can be covered with pigment finishes, which create a compact colour layer on the surface. The final appearance of the pigment finishes on the surface is, however, influenced by the type of wood, their different porosity and colour, production technology, light refraction and individual perception of colour finishes (see illustration photo). The relief on beech plywood is so monolithic after being finished with pigment colours that it may look like a pressed plastic part. On the contrary, on the surface of oak or ash, which have more pronounced

pores in their structure, small striations remain visible even after being finished with pigment colours. Pigment finishes are subject to a surcharge as shown in the price list.

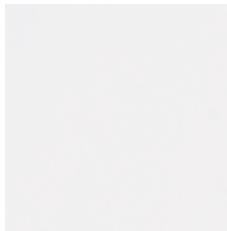

Solid wood tables and table tops cannot be finished with pigments from the Pantone, RAL and NCS colour charts. YYY coffee tables are the only exception; these can be finished in pigments. When ordering 1–10 pieces the surcharge is multiplied by three, when ordering 11–30 pieces the surcharge is doubled for the selected model.

! Please note that pigment colours from the Pantone, RAL and NCS colour charts are more susceptible to mechanical damage on the surface!

! Solid wood tables and table tops cannot be finished with pigments from the Pantone, RAL and NCS colour charts. YYY coffee tables are the only exception; these can be finished in pigments.

! Please note that prior to using a pigment chosen by a customer, we first assess whether the selected colour is suitable for our products.

Colour difference between beech and oak in B38 – grey shadow

Antique colour

Antique finish is created by using specially developed finishing materials, which are applied manually – this technology underlines the unevenness and the originality of each product. The Antique Classic finish imitates a dark stained chair surface which has been attacked not only by age, but

also by woodworm. Besides irregular, rubbed off, bleached, and hand-worn spots, the surface is also decorated with tiny holes made by the woodworm wood master. Antique colour incurs a surcharge as specified in the price list. The same surcharge applies to Antique cane weave.

B130/A antique classic
beech

! By default, we finish most of the seating furniture in the Antique Classic without faux woodworm holes. In that case, the colour will be identified as B130/A0. Faux holes can only be applied to products in the classic bent collection (identified as TON R&D).

! To be protected against damage by liquids, Antique Classic table top are finished without woodworm holes. In this case, the colour code is B130/A0.

! We apply Antique Classic only to beech wood products.

Bicolour

A two-colour combination often emphasises the product's beauty and exceptionality, as it cannot be applied to all products or be used with all colours. For technological reasons, only stain colours can be combined. However, the most popular combination is a base in colour Natural with plywood or table top in a contrasting colour finish. Bicolour is available without a surcharge and is marked by a symbol in the price list.

If you are interested in the bicolour option for a product that does not have a tick mark on the bicolour line in the price list, please contact your sales representative. We try hard to respond favourably to customer requests. Orders that include a non-standard finish incur a surcharge.

! B276, B130/A - white powder, antique classic and pigment colours cannot be combined as bicolour. However, if we receive a specific specification, we will check whether the bicolour you requested for your product is technologically possible. A surcharge applies for this service..

Gradient

From a soft pale to a rich dark colour – this is what the gradient finish looks like. The layers of colour are applied gradually in uneven layers and distances. The colour gradient is further enhanced by manual sanding between the staining layers. In combination with the more prominent texture of

ash wood, this creates a unique combination for each product that cannot be repeated. The surface is finished only with transparent lacquer. We offer the gradient finishes on chairs and armchairs made of ash wood as standard colours without a surcharge.

B501/G gradient turquoise
ash – lacquer

B502/G gradient green
ash – lacquer

B503/G gradient grey
ash – lacquer

■ Socks

It is possible to apply special finishing to the ends of legs of selected products from our range, which resembles "socks". We offer colour combinations with socks only in the versions shown below. The

height of the socks is 10 cm (excluding the glide). You can identify the option of application of socks according to the surcharges shown by individual products.

! Please note that chairs with pigment finishing can only be fitted with natural finish or stained stocks.

! Please note that the height of the socks is influenced by the design of the product (e.g. upholstery, leg connection). According to the design, the height of the socks may be increased by up to 5 cm for technological reasons.

! Please note that chairs with natural or stain finishing can only be fitted with socks in a pigment finish.

upholstery and upholstery decorations

Upholstery materials are divided into price categories. Fabrics and artificial leathers fall under categories A to E and natural leather falls under categories 1 and 2. Natural materials make up more than 50% of many fabrics. All upholstery materials, especially those with high wear resist-

ance, are suitable for use in public areas. Many of them also fulfil the safety requirements for flame retardancy. In compliance with environmental protection, the materials fulfil the requirements of EU regulations or other internationally recognised organisations.

! Click on this [link](#) for detailed photographs.

Fabrics and artificial leathers

■ Cotton mixture

Cotton is one of the most important and oldest natural raw materials used to make textiles. Cotton yarn is flexible, soft and pleasant to the touch. Cotton has a high tensile strength and abrasion resistance. In combination with flax yarn, the fabric strength is further increased. Flax yarn is characterised by its single-direction fibre, which gives the fabrics a natural appearance. The admixture of viscose, which is used as a substitute for silk, gives the fabric a higher gloss and more flowing character. The artificial fibres (polyester, acrylic) which are elastic and ductile, increase the flexibility, pliability and shape stability of the mixed fabrics.

■ Wool

Wool is a natural fibre of the highest quality. The dyed wool fibres are highly colour-fast. Thanks to the water and protein content, the wool is naturally fire resistant and its ignition point is 700 °C, for which reason it fulfils the high requirements of flammability tests. The wool also has antibacterial properties. The rugged surface of the fibres in combination with their extraordinary ability to absorb moisture prevents growth of bacteria which prefer the smooth walls of artificial fibres. Woollen textiles are good absorbers of noise and increase the sense of peace and quiet around us. Production of wool is based on the principle of renewable energy sources and is environmentally friendly.

■ Polyester

Polyester is a synthetic fibre with versatile application in the textile industry thanks to its properties. Polyester fibres have very good resistance to wear and sunlight, which increases their durability and colour-fastness. The cross-section of the fibres influences the properties of the textiles and may lend them a silky appearance and pleasantness to the touch. The polyester materials have low absorption, which makes them easy to maintain.

■ Trevira CS

Trevira CS textile polyester fibres are developed especially to fulfil the highest requirements par-

ticularly in the field of fire protection. The letters CS incorporated into the name are a synonym for Comfort & Safety. Fire resistance is incorporated into the actual composition of the fibre. The use of the material, natural ageing or washing do not affect the composition of the fibre, and for this reason Trevira CS textiles do not lose their resistance to fire during usage. This differentiates Trevira CS from textiles that have only a surface protection layer on the fibres. This may be disrupted in time and reduce the resistance of the textile. Properties such as colour-fastness and high abrasion resistance also improve comfort of Trevira CS fabrics. The materials are easy to maintain, wash and dry, which also leads to lower energy consumption and environmental friendliness.

Trevira CS Bioactive fabrics fulfil not only the requirements of preventative fire safety, but also enhanced cleanliness. These fibres contain silver, which has antimicrobial effects. As soon as bacteria come into contact with the surface of the textiles, they are damaged by the silver ions, thus preventing their proliferation. It thus eliminates the creation of odours resulting from the decomposition of bacteria. The antimicrobial effect of the fibre is permanent and does not decline with use, washing or the application of disinfectants. This material pose no hazard to health and does not damage the skin.

■ Alcantara

Alcantara is a special textile fabric whose brushed surface has the semblance of velour leather. The essence of the material is fleece made of ultra-thin polyester fibres, which are wrapped with polyurethane. Polyester lends the material strength while polyurethane lends it softness. Alcantara is used for upholstering in the furniture and automotive industry because it is breathable, flexible, crease resistant, wear resistant, plus it is easy to clean, wash and maintain. The unusually dense structure of the material means that it is practically impermeable, so any spilled fluids do not cause stains. They remain on the surface, from where they can be removed easily.

! Virgin wool comes directly from shearing of healthy adult sheep or from lambs' first shearing and is processed for the first time (not recycled wool).

! As the manufacturer, we reserve the right to differences in the upholstering process if required by the shape of the backrest or seat and the material properties (ductility, pliability). Please note that especially the Split 373 and 374 armchairs are in such case supplied with two vertical lines of stitches on the inner side of the backrest. The Malmö 332 chair has sewn side pieces in the sides of the bent areas if upholstered with Alcantara or natural leather. The Leaf chairs 437 and 439 have horizontal seams in the bent areas of the seat if upholstered with Alcantara and all artificial leathers. The seams can also be applied to the customer's upholstery if the delivered material is not sufficiently ductile.

■ Artificial leather

The basis of artificial leather is textile to which PUR, PVC layers or their mixtures are applied. A texture characteristic of natural leather (hide) may be printed onto this layer. Developments in the processing of artificial leather in modern times have resulted in artificial leather not being discernible from natural leather at first glance and thus enabling customers to enjoy the appearance

and comfort of leather at bargain prices. Further advantages of artificial leather include high abrasion resistance, water resistance and easy maintenance. These properties together with the fire retardant finish provide a wide range of applications of artificial leather in public areas, healthcare industry and in households.

Leather

Leather is pliable and warm to the touch, permeable, elastic, has a characteristic scent and is resistant to wear. Its quality depends on the animal's lifestyle but also on how the leather was processed. Minor defects occurring during the animal's life, such as wrinkles, veins, small scars or scratches are regarded as permissible and are even required as an evidence of the ,genuine

Wrinkles

and unique' quality of the leather. Unacceptable defects are deep scratches, burn marks, thin skin and also defects originating from processing the leather. The long-term natural appearance of leather can be preserved by regular care and by following the few simple principles of use found in our Furniture care & maintenance manual.

Scars

! For leather renovation, we recommend a special kit from the Swedish company Elmo, which you will find in the price list under the name Carekit Elmo and the identification code CB0002. The kit is suitable for all types of leather from our range.

! As the manufacturer, we reserve the right to differences in the upholstering process if required by the shape of the backrest or seat and the material properties (ductility, pliability). In case of natural leather upholstery, we draw your attention mainly to the Split 373 and 374 armchairs, which we supply with two vertical lines of stitches on the inner side of the backrest. The Malmö 332 chair has sewn side pieces in the sides of the bent areas. The Leaf 437 and 439 chairs have horizontal seams at the bends of the seat part. Exceptions may apply to the upholstery also in the case of natural leather sent by the customer!

■ Aniline leather

This leather is processed with vegetable oils. Only water-soluble aniline dye is used to dye the leather so the surface of the leather is not treated with a pigment layer. The leather thus retains its open pores and natural permeability, softness and smoothness. Permeability increases user comfort. The temperature of the leather easily adapts to the temperature of the human body, thus eliminating the feeling of cold or unpleasant overheating. Aniline leather best manifests the natural character of leather. The non-uniform colour, natural flaws and individual surface pattern accentuate the originality of each piece.

Elmotique is a thinner aniline leather with a tie-dye effect which shows all the properties of original leather.

■ Semi-aniline leather

Semi-aniline leather is dyed just like aniline leather. But a thin layer of pigment is applied to the surface to protect the leather from damage. For this reason, semi-aniline leather can also be

used in public environments. The pigment layer on the surface only partially reduces the permeability of the pores, it does not cover the natural marks of the leather and maintains the contrasting colours. Elmosoft is a soft and pliable semi-aniline leather which is available in a broad palette of shades. It fulfils applicability in the public sector according to the BS5852 Crib 5 Test.

■ Pigmented leather

Pigmented leather can also be dyed with aniline dyes. The epidermis may be brushed. The surface finish is a layer of pigment dye with an imprint of the uniform raster of the leather surface. This results in loss of natural permeability, reduction in softness and the ability to remove moisture. On the other hand, the pigment layers have very good wear resistance, colour-fastness, better resistance to soiling and are easier to maintain. Prince and MDR are pigmented leathers which fulfil the requirements of intensive usage of products that are easy and quick to maintain.

! A product upholstered with aniline leather becomes a new member of the household which requires regular care and careful handling. Since the leather has no surface finish, it is susceptible to scratching, absorption of fluids and dirt. Direct sunlight is also harmful to it. In time, the surface acquires a characteristic patina.

! Thanks to the pigment layer, the surface finish of semi-aniline leather is more resistant to sunlight, scratching, stains and fluids. But this does not mean that it does not require regular care.

Polo: an airy textile mesh which is used for back part of Chips lounge chair. It can also be used as an alternative to the cane seats and backs on classic bentwood models.

If used on a seat the Polo mesh is always combined with special underlay material for increased durability.

! The reinforcement mesh cannot be supplied on orders to Germany, Austria, Belgium, Switzerland, Luxembourg, the Netherlands and Liechtenstein.

Technical data

Abrasion resistance / The capability of upholstery materials to resist abrasive effects during the product use. Abrasion resistance is indicated in MD* units – EN 12947-2. The average MD value for HORECA market is 30 000 MD.

Pilling / Pilling can occur when materials, both natural and synthetic, rub against each other. It is an inherent feature of materials and has no effect on the fabric's function or durability. This feature is tested using the Martindale method modified according to the EN 12945-2 standard. The tested sample is then assessed on the scale of 1 to 5 (5 – almost no change; 4 – slight changes or pilling in an initial stage).

Flame retardancy / The upholstery material has the ability to extinguish itself as soon as the source of fire is removed. This means that the combination of upholstery material and filling may burn when exposed to direct fire but, when the source of fire is removed, the burning will stop immediately. There are a great many regulations on testing fire resistance. To ensure the greatest possible protection, we recommend combining a self-extinguishing upholstery material with PUR foam with the same qualities – see "Self-extinguishing PUR foam" on p. 43.

Ecology / Oeko-Tex Standard 100 is a testing and certification system assessing the fabric's health safety. Test samples are tested for the presence of pesticides, heavy metals, formaldehyde, carcinogenic dyes, etc. REACH is an abbreviation which expresses the approach of EU Member States to chemical substances particularly in connection with protection of human health and the environment. The focus of interest are all chemical substances, particularly toxic, carcinogenic, mutagenic substances, etc. The most dangerous ones are subsequently placed on the list of banned substances (for instance, Lead, Nickel, Phthalates). The REACH Directive stipulates the obligation of manufacturers to prove the use of safe chemical substances and to provide consumers with information about the use of dangerous substances. RAL-UZ 117 are criteria stipulated in the Federal Republic of Germany for the assessment of upholstered furniture in terms of environmental protection, public health and service life. Environmentally-friendly products and materials are then marked with the "Der Blaue Engel" (Blue Angel) symbol.

Cleaning / Cleaning symbols provide information on the proper care of the material so that it is not permanently damaged by unsuitable care.

* MD unit (Martindale) represents one special movement of the machine which is testing the surface of textiles. The number of MD units represents the number of cycles during the testing up to the moment when the first fibre on the tested textile tears.

! Light colours of fabrics, artificial and natural leathers can be stained when in contact with other materials (non-colourfast textiles, denim, newspapers, magazines etc.). Staining by chemical reaction of colour pigments is not a sign of low quality of upholstery materials and therefore cannot be covered by warranty or claimed.

! Slight ripples and wrinkles can appear on upholstered products during the upholstery process or during the use of the product. These ripples or wrinkles can be determined by the characteristics of upholstery materials or upholstery technology and therefore cannot be subject to any claim.

Customer's own material

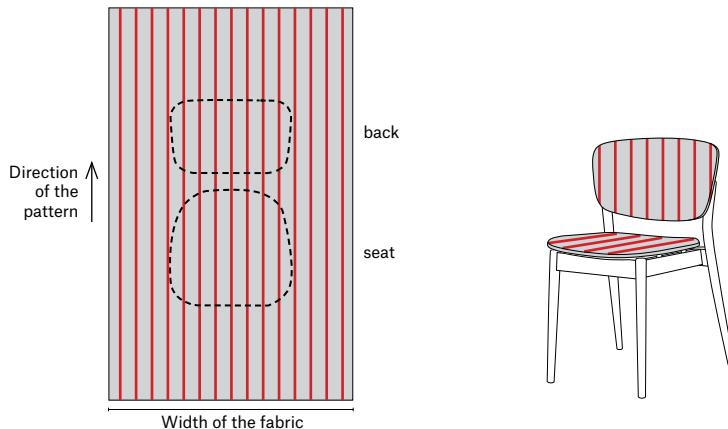

If our range of upholstery materials does not meet your needs, you can provide your own material. The required amount of material as stated in the price list is calculated per piece on orders of more than 10 pieces. For orders of 1 to 10 pieces, the required amount should be consulted with a sales representative. For fabrics and vinyls, the calculation in the price list is based on material width of 140 cm. If you have a material with a different width, we recommend that you contact a sales representative to confirm the amount of material required.

When upholstering furniture we work with the customary direction of a pattern, which can influence the final look of the upholstery. When supplying fabric with a distinctive pattern, we recommend that customers consult with us in advance to agree on the way the pattern is to be used.

! Fabrics, artificial leathers and natural leathers should be sent in rolls only. Artificial leather and natural leather in particular can be subject to deformation when folded and such damage can be irreversible!

! In case of COM, mark distinctly what shall be the face side. If the customer's fabric is chequered, striped or is of another special design which can be upholstered both horizontally and vertically, indicate how you wish to place the design on the seat and backrest. In this case, the material consumption can be higher than expected. If the face side or the direction of upholstering is not marked, we reserve the right to determine it by ourselves.

! Regarding upholstery with customer's own material (COM), we reserve the right to refuse any material which is not suitable for upholstery of our seating furniture or is not delivered in the requested state.

Decorative stitching

The Split lounge armchair features decorative stitching along the top edge of the backrest and the armrests. The customer chooses the colour of the stitching and has the option to either highlight or downplay this decorative element.

Sale by the metre

Fabrics and artificial and natural leather are also available for sale by the metre. Provided the required material is in stock in an adequate quantity, we can dispatch it within 5 days. If not, the lead time depends on the delivery terms of our supplier

and could be between 2 and 4 weeks. For fabrics and artificial leather, the minimum order quantity is 0.5 m. Leather can be ordered only in pieces, i.e. about 4 to 5 square metres. The current price will be given to you by the seller.

Flame retardant PUR foam

The basic option for all TON's upholstered products includes self-extinguishing PUR foam that complies with standard CAL 117. There are many different regulations for testing fire resistance. The British standard BS 5852 Crib 5, which sets high criteria for self-extinguishing, is widely recognised. TON can supply PUR foams complying with the requirements of this standard for an additional fee. Additional fees can be found in the price list.

Selected products have self-extinguishing BS 5852 Crib 5 foam as standard. In these instances, the price list does not state a supplement but uses the * symbol. To ensure the greatest possible protection, we recommend combining self-extinguishing PUR foam with an appropriate fabric that complies either with the CAL 117 standard or with British standard BS 5852 Crib 5.

Decorative nails

Upholstery of selected models can be complemented by decorative nails, especially if upholstered with artificial or natural leather. Antique bronze is our standard nail. Surcharge for decorative nails is listed for applicable models in the price list.

Decorative nails

! Please note that small fragments of plastic material that was used to position the nails may appear around the decorative nails.

customisation

Embossed seats and backrests

Embossed seats/backrests can be used on selected models from the classical bentwood collection. Possibilities of the embossed seats/backrests are

listed in the price list. These seats and backrests are not subjected to a surcharge.

Glides

Glides protect the product material as well as the floor against damage, can reduce noise and help to make moving the chair on the floor easier, especially on carpets. Specify the required type of glides to suit your floor in your order. You can follow our recommendations, but please bear in mind that these are merely informative and not binding. If you are not sure which type of glides to

choose, request an opinion from your floor covering supplier.

We supply felt glides in white or black colour.

Teflon glides are gentler on floors than other types of glides. They are suitable for laminate, cork and vinyl floors, tiles, carpeting and linoleum. We have Teflon glides in grey colour.

! We recommend that customers check the wear and condition of their furniture glides once every six months, especially with glides made from felt and Teflon. If glides need replacing, customers should contact their sales representative.

! Note that dimensions of the products are given without the glides. The glides can thus additionally affect the overall height and the height of the seat by 4-12 mm.

! Our offer includes products that have a pre-determined type of glides or products where a standard glide cannot be offered (the Kontor_503 & 523, swivel chair, the Piano_505 swivel stool, rocking chairs, coat stands, benches, etc.).

! The quality warranty cannot be applied to wear of glides when used in unsuitable conditions or at excessive load (unevenness of the floor, rustic character of the floor, perpendicular direction of the planks in the floor to the direction of chair movement, etc.).

■ Type of glides - type of floor:

Teflon glides – laminate, cork and vinyl floors, tiles, carpeting, linoleum

Felt glides – wooden floors

Cane weave

Cane weave has been used in an almost unchanged form since the revival of the technique at the turn of the twentieth century. Chairs made from bentwood with cane seats or backrests are light, airy and comfortable to sit on, especially in the summer. The cane weave is made from purely natural material, is easy to maintain and can be renovated at any time.

Today, ready-made cane sheets are used instead of hand-weaving. These are made from the inner part of the stem of rattan liana from the forests of Southeast Asia. Before being processed, the cane sheet is moistened to become flexible and then it is pressed into a groove in the seat or backrest by twisted rattan strings. Drying up, the weave shrinks back to its original size. Rattan fibres natu-

rally split and fray. However, during the processing, the weave surface is cleaned up with a special electric machine. We offer the cane weave in natural or Antique finish.

To increase the strength and durability of natural cane weave, we recommend application of additional plastic weave (reinforcement mesh). The reinforcement mesh is stable, holds its shape and prevents excessive stretching of the cane weave on the seat, which may eventually lead to rupture. The additional mesh can only be used on the seat. We offer the mesh in black and white colour for a surcharge specified in the price list. Due to technological reasons, only black reinforcement mesh is available for the cane seat in Antique finish.

Top side (without mesh)

Top side (without mesh)

Top side (with white mesh)

Top side (with black mesh)

Underside (with white reinforcement mesh)

Underside (with black reinforcement mesh)

! We provide a warranty in accordance with the GTC for products with cane components.

! To protect the fibres from cracking and the weave from getting damaged, do not expose cane products to high temperatures and low air humidity.

! Both versions of the cane weave can be treated following the guidelines specified in the Furniture Care & Maintenance manual. Neither of the versions should be subjected to excessive pressure in one spot to prevent rupture of the weave.

! For commercial premises where products are exposed to heavy use, we recommend use of reinforcement mesh underneath the cane weave.

! The reinforcement mesh cannot be supplied on orders to Germany, Austria, Belgium, Switzerland, Luxembourg, the Netherlands and Liechtenstein.

! Just like the wood in our products, cane is a natural material with slight colour variations. Possible darker colouring of the cane weave (including of individual fibres) is not a defect and therefore not a cause for complaint. Indeed, it is proof of the material's natural origin.

! Antique cane weave incurs a surcharge that is specified in the price list next to the heading Antique.

! Antique cane weave can only be used with products finished with stains B4, B105, B112, B123, B130/A.

Barstools

All our barstools are also available in lower versions, which may be appreciated especially by people who wish to use them at their kitchen counters. The reduced sitting height has been selected with respect to the chair's construction, safety and aesthetic appearance. In your order, simply state whether you want a high or a low barstool. Prices and surcharges are identical for both versions. Dimensions are listed in the technical information in the price list.

■ Footrest plate

With most barstools we offer a steel footrest plate in black or silver colour to protect the footrest from wear. This option incurs a surcharge. The shape and quantity of required plates varies by model. The surcharge stated in the price list is always for the full quantity required for the selected product.

Footrest plate

! With the Rioja and Prag barstools, the price is for 4 footrest plates; with the Stockholm barstool it is for 2 plates. The number of footrest plates is determined by the number of directions from which one can be seated on a specific barstool.

Connection into rows

Merano chairs are offered with a simple **Merano link** connecting set. Individual parts of the set are placed on the side of the backrest support legs

and may be easily linked or unlinked. The connecting set enables stacking of the chairs. The surcharge per one set is listed in the price list.

■ Side cover

In addition to the connecting set, we also offer covers for the connection parts of the first and last chairs in the row. The covers can be marked with laser-cut numbers that designate the order

of individual rows. The covers are supplied in the same colour finish as the chairs. The cover can be found in the price list under reference number 309 279. The price is quoted per one set.

Side cover

Connection into rows – detail

Transport trolleys

For transport of stacked Merano chairs and P.O.V. stools we recommend the use of specially designed transport trolleys.

■ Merano trolley

The trolley will carry up to 14 non-upholstered chairs and will move through doors that are at least 60 cm wide. The back wheels are easily lockable. The trolley is available only in B123-black grain finish and can be found under code 799 405 in the price list.

! If the Merano chairs are standing on the floor, they can be stacked up to a maximum of 5 chairs.

! The total height of the Merano trolley with stacked chairs with veneer seat is 200 cm.

■ P.O.V. stool trolley

This minimalist, discreet trolley can stack up to 10 stools. The trolley is 40 cm wide, making it ideal for narrow spaces, and comes equipped with swivel wheels for easy movement. The trolley is available in B123-black grain finish and can be found under code 799 458 in the price list.

! The total height of the P.O.V. trolley carrying 10 non-upholstered stools is 168.5 cm; the total height with 10 upholstered stools is 183 cm.

Stackability

Some chairs, armchairs or barstools can be stacked one on top of the other. In the price list, stackability is marked by a number, which represents the maximum quantity of stacked chairs. As a standard, products with veneer seats are supplied with plastic stops, which significantly decrease the risk of damage in the course of frequent handling.

! Pressure marks on upholstered seat or backrest caused by stacking cannot be subject to a claim.

Interlays

To prevent the creation of pressure marks on upholstered seats as a result of stacking, we recommend the use of wooden interlays. These have been created for the Bergamo, Treviso, Lyon, Merano, Stockholm and Valencia models.

Ornaments

Another option how to change appearance of a standard design of respective models is the application of the ornament on the chair backrest or seat (engraving). Engraved ornaments are made by laser on the outer side of the backrest into the depth of approximately 1 mm. This option can give some kind of originality to the

product, which may be interesting especially for gastronomic facilities.

Engraving is done at customer's request. For engraving surcharges listed in the price list, the minimum order is 20 pieces.

Engraving is also possible on smaller orders, with surcharge calculated on a per-order basis.

! When ordering ornaments, please specify their size and placement. Lead time and price for application of more complex designs are subject to an individual agreement.

Detail of engraving – light colour finishes

Detail of engraving – dark colour finishes

Ready-to-ship products

Our most popular products are often in stock and ready to ship. We recommend monitoring current stock levels on our website or contacting a sales representative. Ready-to-ship products are fitted with Teflon glides, which are suitable for most types of flooring. Teflon glides can be exchanged

for other types of glides or footrest plates for an additional. Some of the ready-to-ship products can also be upholstered. If the chosen upholstery material is in stock, the finished product can be shipped within 2-3 weeks.

Leg connections

You can find codes of leg connections in the description of models in our sales quotes, order confirmations and other documents. We show their schematic drawings for illustration.

As part of ongoing care for your furniture, we recommend that you regularly check and, if necessary, tighten the screws. At a minimum, this should be done once every six months.

**tables,
table tops
and bases**

tables

Our collection contains tables made from a solid wood structure with a solid wood table top, but also tables with legs made of extruded plywood. You can also choose another table top material for certain table types. The table top type

is specified under the respective product number and the relevant letter (such as **M** = solid wood). We also offer combinations of separate table top and metal central bases.

! The shapes of the edges and the corners are given by the construction method and cannot be changed.

! Click on this [link](#) for detailed photographs.

Colours and surface finishes of tables and separate table top

The information provided in the chapter "Wood, colours, surface finishes" on colours

and surface finishes applies to tables and table top as well.

! Solid wood tables and table tops cannot be finished with pigments from the Pantone, RAL and NCS colour charts. YYY coffee tables are the only exception; these can be finished in pigments.

Table top materials

B – multiplex top

The table top is made of plywood from beech veneers, veneered from both sides. The top and underside of the table top are also covered with a beech veneer.

! Please note that due to natural origin of the table top material, the top layers can absorb the finishing materials differently (applies to letters B, D, F, M, N, U).

D – veneered top + veneered edge

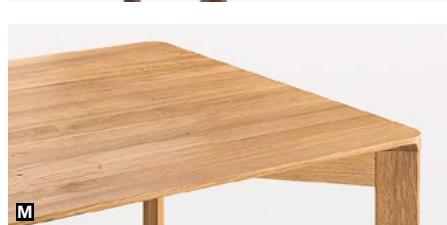

N – veneered top + solid wood edge

The basic material is multiplex board which is veneered with cut ornamental beech or oak on the upper side (letter D). Another option is a solid wood edge from beech or oak (letter N).

F – veneered MDF top

The basic material is MDF board veneered with beech veneer from both sides.

! The rustic finish can only be applied to the table top. The table legs or pedestal have the standard finish.

M – solid wood top

The solid wood table top comprises lengths of wood that have been glued together. Attention must be paid to colour differences where there is a large edge-glued panel, because the individually affixed squared logs come from different parts of the trunk. In addition, a dimensional tolerance deviation of 3–5 mm is set for solid table tops (depending on the width of the table), because wood, a natural material, responds to its surrounding environment. Such natural reactions may include spontaneous sagging, which is why table tops with dimensions larger than 50 cm are supplied with bracing on the underside as standard.

Solid wood rustic

U – multiplex top+veneered surface

The basic material is multiplex board which is veneered with cut ornamental beech or oak on the upper side. The multiplex consists of veneer layers applied crosswise, glued and pressed similarly to plywood. It is characterized by higher thickness of the inner veneers, so the properties of the pressed boards approach solid wood. Depending on the shape of the edges, the veneers can also be pressed to the edge or its part. Otherwise, characteristic layers of the pressed veneers are visible on the edge.

Glides and wheels

Dark felt glides are enclosed to the tables for the customer to attach them to the table as needed. The extendable tables have small inbuilt wheels at the end of legs, which make easier handling of

the tables when being extended. The wheels are installed only on the side of the table that moves during extension.

! Note that glides cannot be used for the Ironica and Leaf tables because the leg ends are rounded.

! The wheels are not used for transporting the table (either in a folded or extended state).

Assembly of tables and handling

Please follow the simple icons used in the Assembly instructions or marked on the packaging. The figure defines the recommended number of people needed to assemble the table or to handle it safely.

Table top grain

Individual lines display direction of wood grain on a table top.

Table Chop extended

Rustic table top (fixed table)

Linking tables

Some of the tables in our range can be connected into rows using simple fittings, thus creating a line of tables or other shapes necessary for ceremonial events or conference premises. Tables suitable for linking are selected with regard to the design of the table, thickness of the table top and shape of the edges so that their connection is stable.

Linking tables together can also eliminate minor height unevenness of the floor.

The connecting hardware has two parts, which are always located on one side of the table (see

the drawing). In this way, it is possible to achieve a universal connection of various tables of the same size. The connecting fittings are fixed to the bottom of the table top and after being folded do not disrupt the appearance of the table (see the illustration photo). The surcharge in the price list is always listed for one connecting set.

The drawing shows the most common variants of linking tables, which are marked as options A, B and C. Simply state the variant you have chosen in the order.

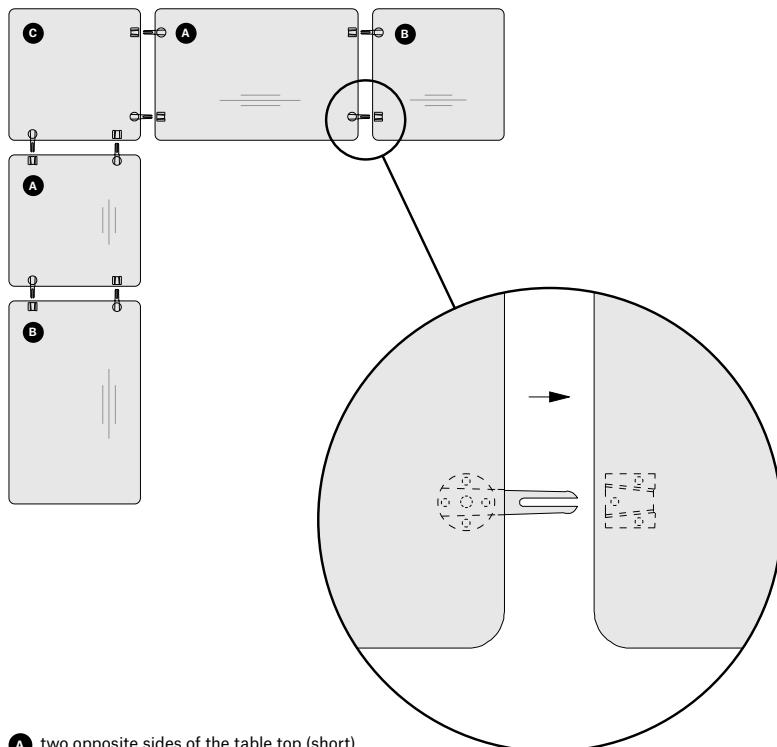

Connection

Disconnection

Configuration of connecting hardware on table top

- A** two opposite sides of the table top (short)
- B** one side of the table top (short)
- C** two adjoining sides of the table top (across the corner)

! The lines in the drawing show the direction of the fibres on the table top.

Extendable tables

Chop 446

! Do not overload the extended table at the point of connection of the table top. Do not sit, stand on the tables, etc.

Jylland 476

Stockholm 700

Trapez 708

Stackability

Only a few tables with solid wooden structures can be stacked if necessary. For this purpose, we offer the Lasu table from our range. The tables have recessed felt pads on the bottom, which

prevent scratching of the table top after stacking. Stackability is indicated by a number in the price list, which expresses the maximum number of pieces that can be stacked.

! During stacking, it is necessary to act with great caution to prevent damage to the table top or other parts.

Stackability

p.o.v. collection

Modularity and organically shaped table bases. P.O.V. tables have an unassuming appearance, but can also become the focal point of the room. This depends only on the point of view you choose. The collection includes coffee, dining and bar heights, three types of table base and table tops in six shapes. Overall, this modular system can create dozens of variants, and can be accessorised by a stackable stool with the same name.

Table top

M - solid wood top – the basic material is a solid wood top consisting of wooden prisms glued together (so-called piedrot). Colour differences must be considered for solid wood piedroit, as individual glued prisms may react differently to the finishing materials. Dimension tolerance of ± 3 mm is defined for solid wood table top, since wood as a natural material naturally reacts to the ambient environment. The natural reactions may also include spontaneous sag of the table top. Table top with the size above 50 cm are therefore supplied with a reinforcement on the bottom side.

Y - High-pressure laminate – the basic material is a multiplex board laminated with high-pressure laminate (HPL) with thickness of 0.8 mm. The multiplex consists of layers of veneer applied crosswise onto each other, glued and pressed similarly to plywood. The multiplex is distinguished by a greater thickness of the internal veneers, thus the properties of these pressed boards approach solid wood. We offer the laminate with nanotechnology in the colours L20 – white and L123 – black.

Z - High-pressure laminate with nanotechnology – the basic material is a multiplex board coated with high-pressure 0.9 mm laminate with nanotechnology pressed onto the top side.

The multiplex consists of layers of veneer applied crosswise onto each other, glued and pressed similarly to plywood. The multiplex is distinguished by a greater thickness of the internal veneers, thus the properties of these pressed boards approach solid wood. We offer the laminate with nanotechnology in the colours L20 – white and L123 – black.

B - multiplex top – the table top is made of plywood from beech veneers, veneered from both sides. Individual layers of veneers are applied crosswise, glued and pressed together.

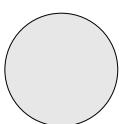

U - multiplex top + veneered surface – the basic material is a multiplex board veneered with beech or oak veneer on the top. It is characterized by higher thickness of the inner veneers, so the properties of the pressed boards approach solid wood. Depending on the shape of the edges, the veneers can also be pressed to the edge or its part. Otherwise, characteristic layers of the pressed veneers are visible on the edge.

! Click on this [link](#) for detailed photographs.

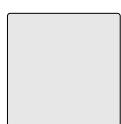

! Multiplex table tops with HPL (marked as Y) and nanolaminate (marked as Z) finish come with natural edge regardless of the HPL, nanolaminate or the base colour. If you are interested in a different colour edge please contact your dealer, who will check this option for you.

6 Spheric rectangle

Bases

You will find three types of table base in the collection – a simple, central leg with a three-sided conical shape, a combination of two such legs, and a long central base. The latter two provide greater stability for larger table tops. The table bases are available in heights suitable for coffee tables, din-

ing tables and bar tables. The coffee table comes with a simple central leg only, but the bar table offers a choice between a simple central leg and a long central base.

! To ensure complete stability, we provide weights for all bases. The specific weight depends on the size of the selected base and table top.

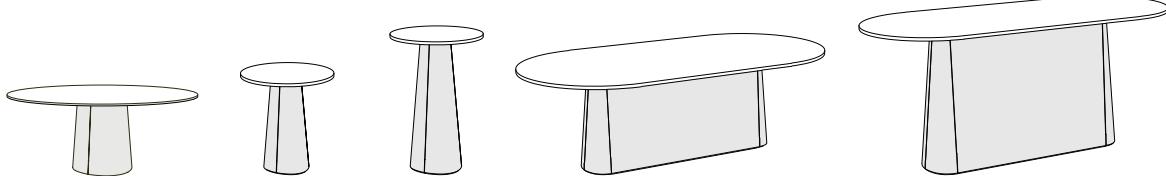

Table colours and finishes

P.O.V. tables and table tops can be finished as outlined in the chapter 'Wood, colours, surface finishes'. The bicolour option is available for this collection.

Edges

All table tops can be finished with rounded, bevelled and straight edges.

Accessories

The collection includes several optional extras. All tables can be supplied with openings for cables and power outlets/USB ports. If you wish to select a specific power outlet/port, please contact your sales representative. This optional extra is particularly suitable for tables for offices and meeting rooms.

The hook is intended for bistro tables and has a maximum carrying capacity of 5 kg.

! The price list does not include surcharges for power outlets/USB ports. Such surcharges depend on the number and type of outlets/ports selected by the customer.

! The hook is supplied separately together with fastening screws and installation instructions. The space identified for the placement of the hook is indicated on the underside of the table top.

central leg tables, table tops and bases

Central leg table bases

Our range includes central leg table bases. They come in metal or wood and they are offered in three different heights: coffee table, dining table and bar table. To complement them, it is possible to order table top in the specified dimensions.

Bloom Central

Easy Mix & Fix

Hexagon

The table top is attached to the central base by a screw in an insert nut. The base is fitted with adjustable levelling screws, which eliminate unevenness of the floor.

! If you combine one of our table bases with a table top that does not come from TON, we cannot guarantee that the base will be sufficiently stable. The weight of your chosen table top must not exceed the weight of the largest table top we have on offer for your chosen base.

! Y - High-pressure laminate (HPL) is one of the most resistant table top finishes, particularly suitable for food establishments. It withstands temperatures up to 180°C and damage caused by cutlery, cigarettes and liquids, even alcohol.

! Z - High-pressure laminate with nanotechnology is the most advanced generation of laminates. Thanks to its properties, it is suitable for heavy contract use not only in the Horeca sector. It is resistant to high temperatures (hot dishes, cigarette ash), wear (scratching by cutlery), chemicals (cleaning agents), mildew, and food (vinegar, red wine, fruit). It is antistatic, colourfast, water resistant and easy to clean.

Table top

M - solid wood top – the basic material is a solid wood top consisting of wooden prisms glued together (so-called piedrot). Colour differences must be considered for solid wood piedrot, as individual glued prisms may react differently to the finishing materials. Dimension tolerance of ± 3 mm is defined for solid wood table top, since wood as a natural material naturally reacts to the ambient environment. The natural reactions may also include spontaneous sag of the table top. Table top with the size above 50 cm are therefore supplied with a reinforcement on the bottom side.

Y - High-pressure laminate – the basic material is a multiplex board laminated with high-pressure laminate (HPL) with thickness of 0.8 mm. The multiplex consists of layers of veneer applied crosswise onto each other, glued and pressed similarly to plywood. The multiplex is distinguished by a greater thickness of the internal veneers, thus the properties of these pressed boards approach solid wood.

Z - High-pressure laminate with nano-technology – the basic material is a multiplex board coated with high-pressure 0.9 mm laminate with nanotechnology pressed onto the top side. The multiplex consists of layers of veneer applied crosswise onto each other, glued and pressed similarly to plywood. The multiplex is distinguished by

a greater thickness of the internal veneers, thus the properties of these pressed boards approach solid wood. We offer the laminate with nanotechnology in the colours L20 – white and L123 – black.

M - Finger joint wood board – A finger joint table top is made by gluing pieces of wood in a cascading fashion, which makes the table top strong and durable. The technique allows us to make table tops in any length.

B - multiplex top – the table top is made of plywood from beech veneers, veneered from both sides. Individual layers of veneers are applied crosswise, glued and pressed together.

U - multiplex top + veneered surface – the basic material is a multiplex board veneered with beech or oak veneer on the top. It is characterized by higher thickness of the inner veneers, so the properties of the pressed boards approach solid wood. Depending on the shape of the edges, the veneers can also be pressed to the edge or its part. Otherwise, characteristic layers of the pressed veneers are visible on the edge.

! Click on this [link](#) for detailed photographs.

! Multiplex table tops with HPL (marked as Y) and nanolaminate (marked as Z) finish come with natural edge regardless of the HPL, nanolaminate or the base colour. If you are interested in a different colour edge please contact your dealer, who will check this option for you.

Finger joint wood board

Bases

All bases come in B123-black grain finish. Bloom Central pedestal table also comes with the Sandblasted stainless steel base, which has a smooth, matte, frosted surface. Easy Mix & Fix pedestal tables come with the Brushed stainless steel base, which has a half matte, finely brushed surface.

table tops and bases

The direction of the wood grain in the rectangular table tops is the same as the longer side of the table top.

If you combine one of our table bases with a table top that does not come from TON, we cannot guarantee that the base will be sufficiently stable. The weight of your chosen table top must not exceed the weight of the largest table top we have on offer for your chosen base.

benches

diner

The simple construction made of solid wood and smooth upholstery make Diner benches timeless elegant. Due to their dimensions and variability, Diner benches can be placed not only in public premises, restaurants or hotels, but also at homes. The collection consists of straight modules, end-of-row modules, two types of corner benches, a side table and a cushion. Besides the cost-effective modular system, the length of straight modules can be adjusted to your needs. We offer all units in three heights of backrest, which is er-

gonomically shaped. We also offer some modules in bar height. The sitting comfort is provided by the structure of foam.

Wooden parts in both beech and oak version can be finished in all colours from our collection. By default, all units have upholstered both front and back side of the backrest, so they can be placed anywhere in space. Benches are provided with adjustable levelling feet eliminating prospective unevenness of the floor and protecting the material from damages.

! Please note that dimensions of the benches are given without levelling screws. The levelling screws can thus additionally increase the overall height and the seat height of the Diner benches by up to 20 mm (depending on the floor unevenness).

! Please note that the Diner bench is not available in aniline or semi-aniline leather. Leather does not come in large enough lengths to cover the bench without visible seams, and seamless upholstery is important to the overall look of this product.

■ Bench modular system

We offer the units of bench modular system in pre-prepared lengths of 85, 95, 105 and 125 cm. Individual modules can be freely combined both in respect to their lengths and to their heights. In the price list, the price is given for the whole unit.

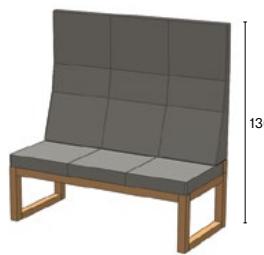

Diner 383 539 – Bench made to measure
Diner 3S3 539 – Length 85/95/105/125

Diner 383 530 – Bench made to measure
Diner 3S3 530 – Length 85/95/105/125

Diner 383 533 – Bench made to measure
Diner 3S3 533 – Length 85/95/105/125

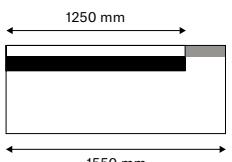

Diner 383 536 – Bench made to measure
Diner 3S3 536 – Length 85/95/105/125

■ End-of-row module

The seat of the end-of-row module is 155 cm long. The backrest of this unit is always 30 cm shorter, which creates an exceptional ending of the row. The module can be placed both on the right and left end of the row or be used independently. In the price list, the price is given for the whole unit. In case of upholstery in natural leather, this module is provided with a seam on the seat part (due to the leather utilization and the length of the module).

■ End-of-row benches made to measure

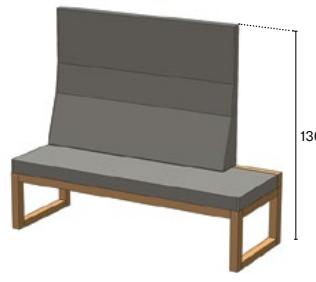

The length of the seat of the end-of-row bench made to measure ranges between 85 and 155 cm. The length of the back is always 30 cm shorter (i.e. between 55 and 125 cm). In the price list, the price is given per 1 running meter and is calculated from the seat length of the end-of-row unit. In case of upholstery in pigmented leather, the end-of-row bench with seat length of more than 130 cm is provided with a seam on the seat part (due to the leather utilization and the length of the bench).

Diner 3S3 536 – Length 155/125

■ Corner benches

We offer corner benches in two versions – either under the angle of 90° or with a semi-circular backrest. Corner units can be used both to connect the individual units under the angle of 90° and to end the row of the benches. In the price list, the price is given for the whole unit.

■ Side table

With a side table, you can create an original ending of the row of benches. You can place it both on the right and left side of the bench, but never as an independent unit. The table top is offered only in the length of 120 cm. The height of the side table is 37 cm. It is not designed to be sat on.

■ Cushion

This simple detail can be used not only as a practical armrest, but also as a comfortable accessory. It can also optically separate individual seat places. In the price list, you can find the Diner cushion under reference 309 253.

Diner 4UI 530

Diner 309 253

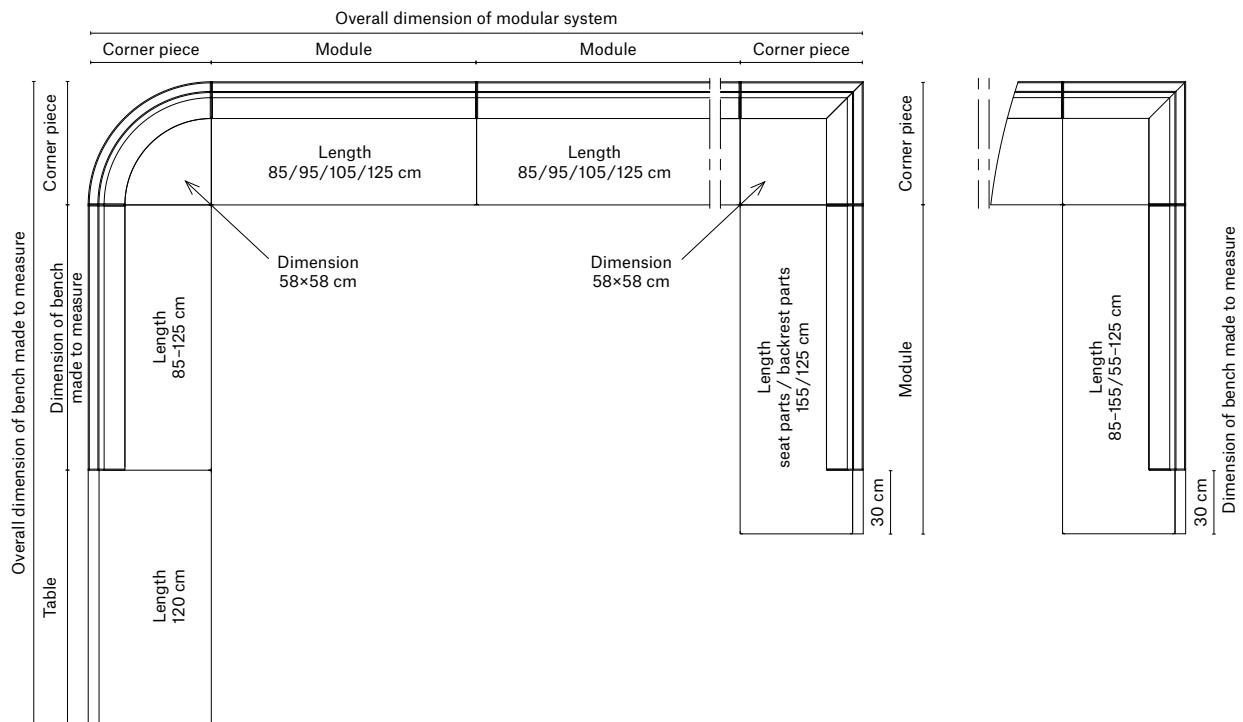

diner – ground plan – example

Purchase orders for Diner benches are accepted only with an enclosed ground plan specifying place dimensions, dimensions of benches or supplementary components, and their arrangement in

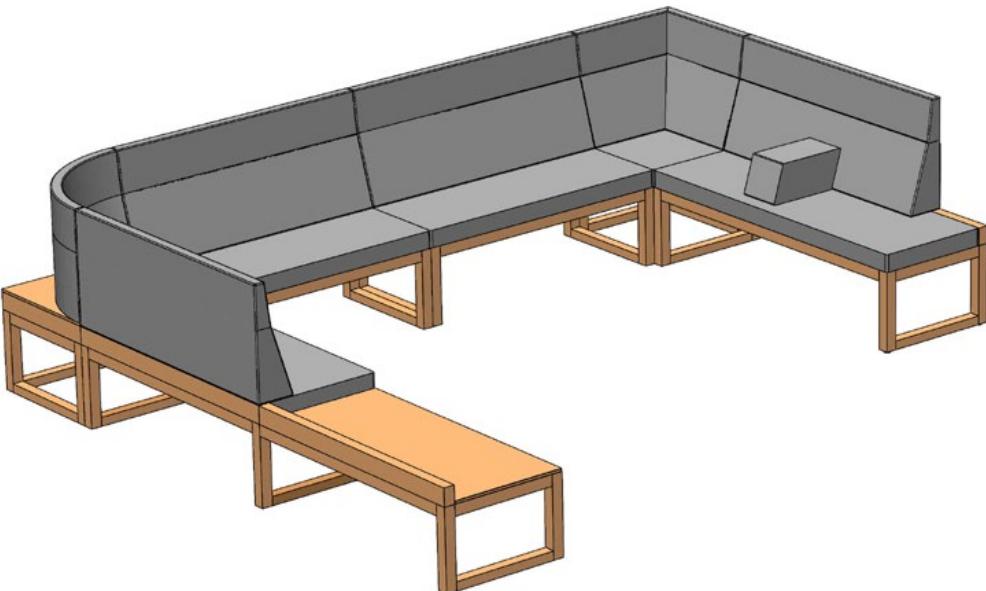

space. Below, an example of feasible combinations of bench units is displayed, as well as the layout of possible dimensions of benches.

! The Seller reserves the right to deviation tolerance from the length of straight bench units up to -4 mm per 1 running meter (the deviation is given by construction reasons).

Ground plan

Arrangement of bench units

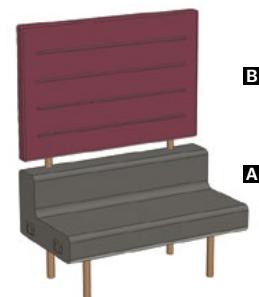

The Gufy benches collection was designed to meet the requirements of any space – both public and private. The seating part **A** with low backrest imitates modern sofas, adding domestic atmosphere even to public spaces. By backrest panels **B**, both the low and high versions, the space can be optically divided, creating thus a calm place for dining. While looking elegant, backrest panels also help to reduce the noise from open space. The core of the collection are straight modules, end-of-row modules and a corner bench, along with an additional armrest and a cushion. Besides the cost effective modular system, the length of straight modules can be adjusted to your needs.

We offer all units in three backrest heights and either on legs or laminate base, which comes in black colour only. Benches on legs can be made also with a lower seat height of 38 cm. The sitting comfort is provided by the structure of foam layers.

Wooden parts in both beech and oak version can be finished in all colours from our collection. It is possible to use different upholstery materials for the seat and backrest part, and two types of decorative stitching for backrest panels. By default, all units have upholstered both front and back side of the backrest, so they can be placed anywhere in space.

! Please note that dimensions of the benches are given without levelling screws. The levelling screws can thus additionally increase the overall height and the seat height of the Gufy benches by up to 15 mm (depending on the floor unevenness).

■ Bench modular system

We offer the units of bench modular system both on legs and laminate base in pre-prepared lengths of 80, 90, 100 and 120 cm. Individual modules can be freely combined both in respect to their lengths and to their heights. In the price list, the price is given for the whole unit. The benches on bases to be placed at the end of the row are provided with the base 17 cm shorter than the seat part (the price is calculated from the seat length of the bench).

■ Benches made to measure

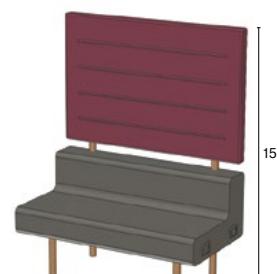

The dimensions of individual units of benches made to measure range between 80 and 120 cm. In the price list, the price is given per 1 running meter and is calculated from the seat length of the bench. The benches on laminate bases to be placed at the end of the row are provided with the base 17 cm shorter than the seat part (the price is calculated from the seat length of the bench).

■ Corner benches

We offer corner benches in three backrest heights and either on legs or laminate base. Corner units can be used both to connect the individual units under the angle of 90° and to end the row of the benches. The seat of the corner unit is 5 cm longer than the straight units, which means it will overlap at the edges. In the price list, the price is given for the whole unit.

■ End-of-row units

End-of-row units can be connected to straight modules as well as corner benches. We offer this unit only as a module with seat length of 60 cm, both on legs and laminate base. On corner units, the laminate base is shorter than the seat part by 17 cm. In the price list, the price is given for the whole unit.

Gufy 383 854

Gufy 383 857

■ Additional armrest

The additional armrest can be added to any kind of straight bench unit. It follows the dimensions of the seat part of the bench and a backrest panel cannot be attached to it. You can use the additional armrest on both sides and make thus an armchair. Any kind of decorative stitching can be applied on the external part of the armrest. In the price list, you can find the armrest under reference 309 255.

Gufy 309 255

■ Cushion

This simple detail can be used not only as a practical armrest, but also as a comfortable accessory. It can also optically separate individual seat places. In the price list, you can find the Gufy cushion under reference 309 254.

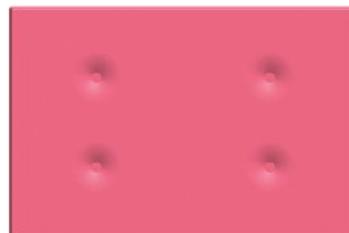

Gufy 309 254

■ Upholstery decoration

Backrest panels and additional armrests can be provided with upholstery decoration S004 with buttons or S008 with horizontal stitches. It is already included in the price, so when placing the order specify its reference number.

! Please note that the Gufy bench is not available in aniline or semi-aniline leather. Leather does not come in large enough lengths to cover the bench without visible seams, and seamless upholstery is important to the overall look of this product.

S004

S008

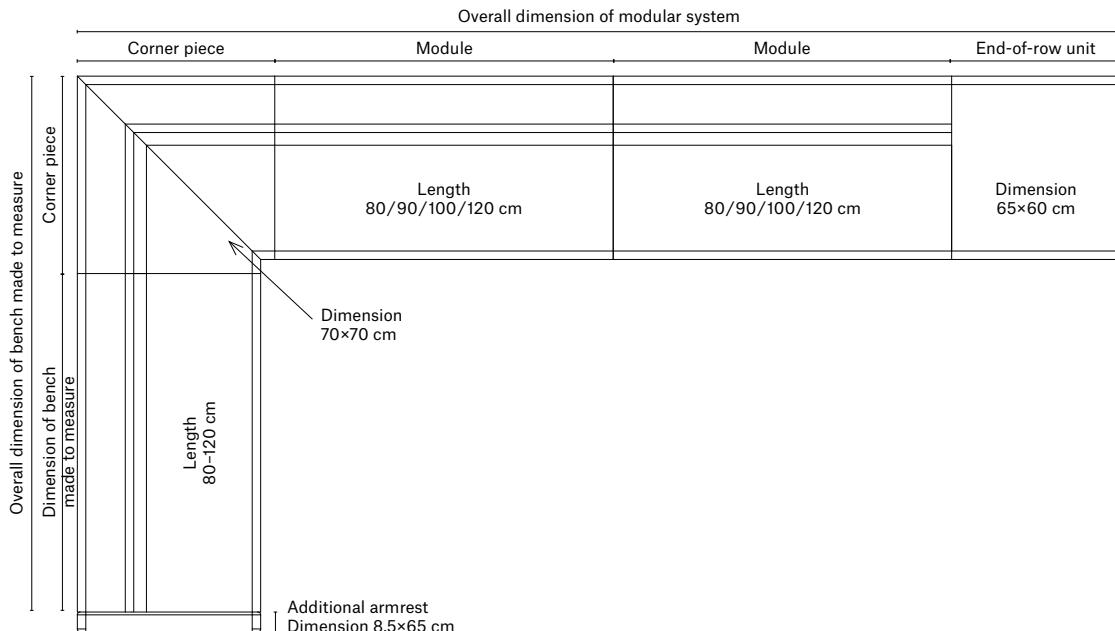

gufy – ground plan – example

Purchase orders for Gufy benches are accepted only with an enclosed ground plan specifying place dimensions, dimensions of benches or supplementary components, and their arrangement in space. If you want to have a special combination

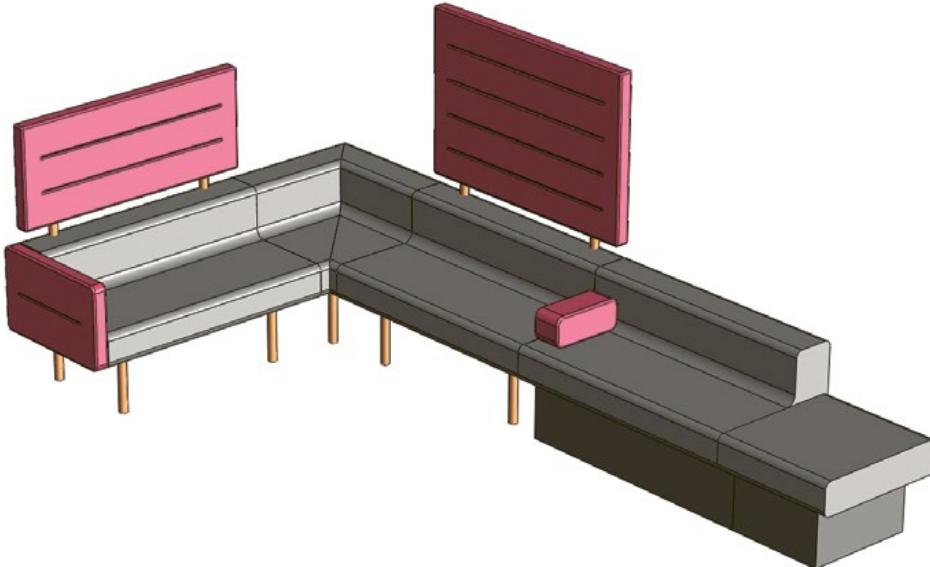

of upholstery materials and decorative stitching, specify it in your order. Below, an example of feasible combinations of bench units is displayed, as well as the layout of possible dimensions of benches.

! The Seller reserves the right to deviation tolerance from the length of straight bench units up to -4 mm per 1 running meter (the deviation is given by construction reasons). Due to safety reasons, we recommend benches with higher backrest to be placed against the wall or back to back.

Ground plan

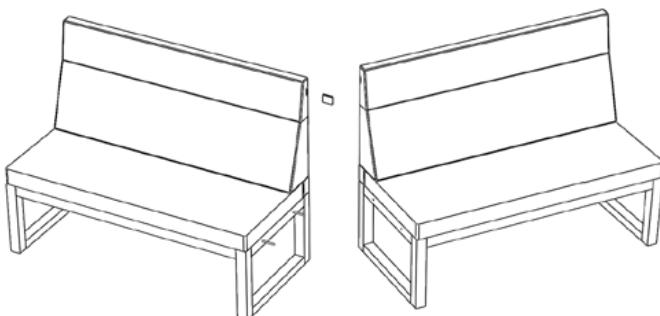

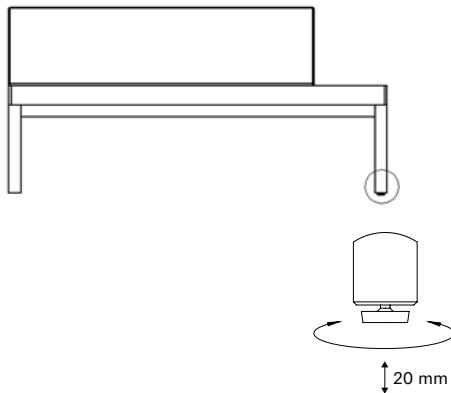

Arrangement of bench units

assembly instructions

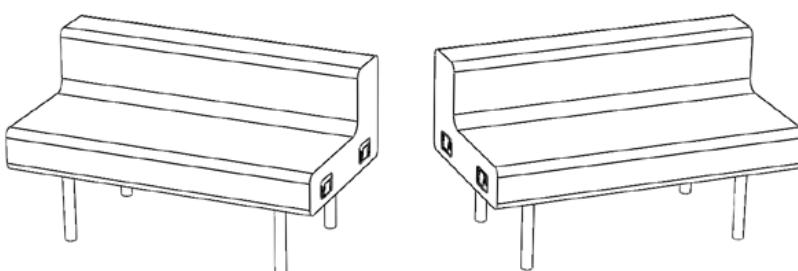

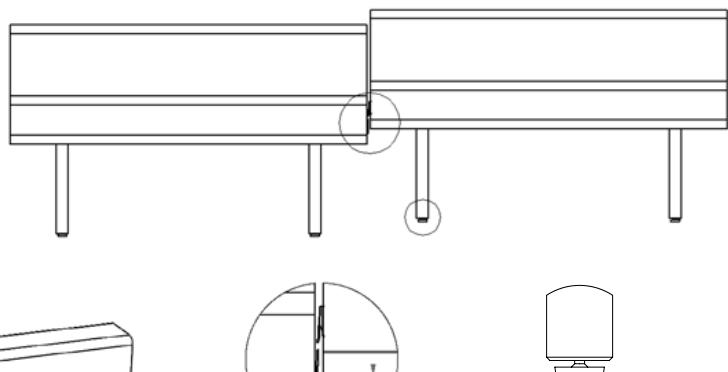

■ Diner

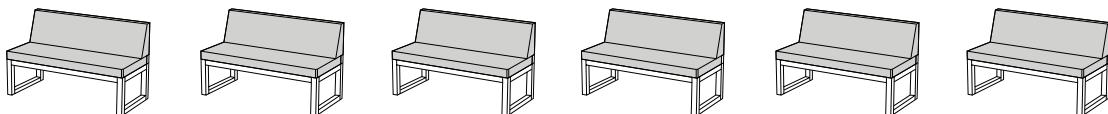

Benches are delivered in individual parts to be connected by screws in several points. Backrest parts are connected by a wooden dowel that prevents the individual parts from an uneven strain. Individual parts are numbered in respect to the assembly process. For assembly of the benches, you will need a handling area of at least 5 cm.

■ Gufy

Benches are delivered in individual parts to be connected by hardware. Individual parts are numbered in respect to the assembly process. For safety reasons, when delivered, benches don't have legs attached. To assemble the benches, you will need a handling area of at least 5 cm.

furniture care & maintenance

Thank you for purchasing a TON product. The mission of TON is to make products that meet the highest demands for design, quality and functionality. This is also documented by numerous awards our products won on domestic as well as foreign markets.

Our product development and manufacture are based on principles of the original manufacturing technology of manual bending, tested by years of tradition and enhanced with the newest knowledge in the areas of

design and other manufacturing technologies. Every product undergoes a specific stress test in compliance with European standard EN 16139 Furniture – Strength, Durability and Safety. Most of our products are made of natural materials such as wood, cane weave, leather, wool, cotton etc. The natural origin of our products is manifested by colour alterations, growth defects of wood or leather, changes in wood texture or micro cracks, folds or waves in leather and fabrics. These are

no defects, rather the contrary. Every TON product is an original unique piece of furniture made by human hands. You can be sure that no one else will have the same TON chair as you. Regular professional care extends the life of any product, thus increasing your satisfaction with its use. Let us inform you how to best use TON products and how to take care of them.

Ambient environment

Just like people are harmed by extreme environmental effects, so is furniture made of natural materials. Non-standard relative humidity (lower than 40 % or, on the other hand, higher than 60 %) can negatively affect the product, causing shape deformation, damage to the upholstery or cane. If the product is exposed to direct

sunshine or another heat source (fireplace, stove, heating radiator etc.), its colour may change, its wooden, cane or leather parts may crack etc. This is a common phenomenon that occurs commonly in the natural environment you live in. Surroundings include also claws of your pets, metal parts of clothes and hard seams,

kitchen knives and other sharp objects which, when used without proper attention, may cause scratches and other damage to the surface of wood or leather, tears in a fabric or cane weave etc.

Wooden parts

Every piece of wood has its unique character and texture, which means that there are no two absolutely identical products and that identical appearance of two table top and additional panels cannot be guaranteed. Also knots and pith rays are common features of naturally growing material. Our products may contain small healthy knots which document the natural origin of the material. The very structure of wood and its processing is a cause of different reactions of the individual parts to dyes and finishing materials. Steaming causes the characteristic pinkish colour of beech wood, which may mainly be seen in the light-stained shades. Steaming also changes wood properties of veneer, therefore veneers and solid wood react differently to dyeing, staining and finishing materials. UV radiation may cause colour differences between solid wood and veneered parts of the same product. Also dye oxidation caused by UV radiation will be different on a table top and a less frequently used or hidden insert panel. These changes cannot be subject to claim.

Wood as a natural material constantly breathes and reacts to the ambient environment. As a result, micro cracks may appear in the lacquer or the wood texture may slightly surface in the course of life of the wooden product. Liquids act negatively on the surface, soaking through may cause stains or glass bottom prints. Therefore, all spilled liquids should be wiped dry immediately. Lacquered or oiled surface can also change colour or get damaged by placing a hot pot on the table top. This unwanted effect may be prevented by careful handling and use of insulating mats under hot pots or bowls.

Another natural reaction to the environment is shape deviation in products with manually bent wooden parts.

For this reason, a dimension tolerance of ± 2 cm is defined for the leg spacing of every bent furniture product. The bent parts may also be stressed by transport, which may result in slight wobble of the product. This is not a product defect, as this condition is remedied by sitting on it. Tolerance of ± 3 mm is defined for solid wood table top to account for environmental effects. This tolerance also applies to the connection of the table top to the additional folding panel.

Treatment of lacquered tops

Lacquered surface finish does not usually require special maintenance. Dust wooden parts of the product with a soft, clean and dry duster of lint-free material (cotton, linen, buckskin). When dusting the furniture, do not press hard on the duster to avoid irreversible polishing of the surface. Wipe off spilled liquids immediately. Do not let large stains dry on the surface but remove them immediately with a moistened cotton cloth and then wipe the treated area dry. Cleaning and treatment with special furniture detergents is not necessary. However, if you do use them, you should follow instructions for use by their manufacturers and test them first on a less visible area.

! Never use concentrates or abrasive detergents (abrasive and polishing paste, powders) as they might scratch and damage the lacquered surface. Never use furniture polish or other products containing oils or waxes on a matt surface as they would produce uneven glossy stains on the surface.

Oiled surface treatment

Oiled surface finish requires regular care and preventive careful use. Dust wooden parts of the product with a soft, clean and dry duster of lint-free material (cotton, linen). Dry spilled liquids from the surface immediately with a textile or paper towel; do not smear the liquid on the surface unnecessarily. Then wipe the surface with a well wrung out cloth in the direction of the wood fibre and dry immediately. Do not let large stains dry on the surface but remove immediately and wipe the area using the same procedure.

It is recommended to check oiled furniture regularly and treat it with a new oil layer when necessary. Wood may absorb oil unevenly during manufacturing and therefore the surface may be rougher to the touch or porous in places. The oil itself also naturally dries out. Rough and abraded spots, glossy edges, stains, minor scratches, dirt from shoes etc. can be repaired by a new oil layer. If you use a furniture treatment set recommended by the furniture manufacturer, follow the instructions for use carefully. If you use any other commercially available product for oiled surface treatment, follow its manufacturer's instructions and test the product first on a less visible area.

How to proceed with oiling can also be found in the video tutorials on our [website](#).

! Never use concentrates or abrasive detergents (abrasive and polishing paste, powders) as they might scratch and damage the oiled surface.

Upholstered parts

The texture of the fabrics used for furniture upholstery is different from the texture of the fabrics used for clothes and cannot be washed in most cases. Sunshine, radiant heat sources, or cold dry air generated by air conditioners cause drying of the fibre, which deprives the fibres from their flexibility, firmness and colour stability. Dust and sand particles are abrasive materials damaging the fibre. Sweat, skin grease or substances contained in cosmetic products can stain the fabric surface or react with the pigments used for the fabric dyeing. These ef-

fects, unlike staining with liquids, can act unnoticed but may contribute to accelerated ageing of the material. During upholstering or subsequent use, moderate waving or folding of the upholstery material may occur. In the course of the product use, mutual rubbing of materials against each other may cause piling on the most stressed parts of the upholstered surface. These changes are given by the properties of the upholstery material or by the used upholstery technology and cannot be subject to claim.

Light shades of fabrics, artificial or natural leathers, can be stained when in contact with other materials (non-colourfast textiles, denim, newspapers, magazines etc.). This staining, caused by chemical reactions of colour pigments, is not a sign of low quality of the upholstery materials and cannot be subject to claim. Natural leather is a very popular upholstery material as it is soft and warm to the touch, has a pleasant characteristic smell and is wear resistant. Its quality depends on the animal's lifestyle as well as on the method of the leather

processing. Minor defects originating during the animal's life, such as wrinkles, blood veins, scars, scratches etc. are regarded as permissible and are even required as an evidence of the 'genuine and unique' quality of the leather. Unacceptable defects include deep scratches, burnt marks, thin leather and processing related defects.

Fabric and artificial leather treatment

Remove dust regularly with a vacuum cleaner with fine suction force and then comb the surface with a soft brush in the pile direction. Wipe the fabrics from time to time with a moistened white cotton cloth or buckskin to prevent excessive drying of the fibre by dry air in the room. Dry spilled liquids from the surface immediately with a white cotton or paper towel; do not smear the liquid on the surface unnecessarily. Do not let coarse impurities dry on the surface but remove them immediately with a dull object (such as a spoon). Finer impurities can be cleaned with lukewarm water (up to 30 °C) with a non-aggressive washing detergent. Do not scrub stains but wipe them off carefully with a moistened sponge. Wipe the stains from the edge towards the centre (or in the pile direction) to avoid making them larger. Do not press the solution to the fabric so as not to wet it excessively. Dry excessive moisture with a dry cloth again. Let the surface dry in room temperature, do not dry it in the sun, near

heat sources, by hair dryers etc. Comb the dry fabric with a soft brush in the pile direction. In case of a stubborn stain, use dry foam, an upholstery cleaner or a chemical cleaner, as directed by the symbol shown on the fabric. Always test cleaning products on a hidden or not very visible part of the upholstery. Foam shampooing should carefully follow the instructions of the detergent manufacturer. If you do not want to risk in-house cleaning or do not know how to do it, ask a specialised company. Pilling may be removed by brushing with a fine brush. Synthetic fibre is firmer and therefore pilling may be removed by careful cutting off with scissors or by means of special blades. Never tear the pilling off the fabric by force. There is no guarantee that the pilling will not reappear after their removal.

Artificial leather is usually undemanding in maintenance. Remove dust regularly with a fine suction force of your vacuum cleaner or with a wet cotton cloth. Dry spilled liquids immediately by a dry cotton or paper towel. Do not let other stains dry on the surface but remove them from the surface immediately with lukewarm water. Wipe the surface carefully with a moistened cotton cloth and dry with a dry towel.

Natural leather treatment

Remove dust regularly with a fine suction force of your

vacuum cleaner or with a wet cotton cloth. Dry spilled liquids immediately with a dry cotton or paper towel. Do not let other stains dry on the surface but remove them from the surface immediately with lukewarm water. Wipe the surface carefully with a moistened cotton cloth and dry with a dry towel. Once the leather absorbs the liquid, the staining may be irreversible! We recommend that you thoroughly clean and condition your leather furniture with special leather care materials 2-4 times per year depending on the level of use. Always use purpose-made leather care materials. When using any of these cleaners, follow the manufacturer's instructions and test the product first on a less visible area.

! Never use chemical solvents or removers (acetone, benzene, trichloroethylene) or abrasive cleaning paste for fabrics, artificial and natural leathers. Never use polishes or oil- or wax-based products for artificial leather cleaning as they might produce uneven glossy stains on the surface. When cleaning, prevent contact of the detergent with the wooden parts of the product. Do not use hot water or steam cleaners to avoid damage to the upholstery material and do not expose the wooden parts to excessive moisture and heat.

Other parts

The cane in our products is purely natural. Today, ready-made cane sheets are used instead of hand-weaving. The sheets are made from the inner part of the stem of rattan liana from the forests of Southeast Asia. Before being processed, the cane sheet is moistened to become flexible and then pressed into the groove in the seat or backrest by twisted rattan strings. Drying out then results in the required tensioning of the cane. Rattan fibre as a natural material naturally frays. During processing, the cane surface is smoothened with an electric razor. Cane may crack in a dry and warm environment or by excessive pressure in one place, therefore never kneel or stand on the cane parts of the furniture. To increase the strength and durability of natural cane weave, we recommend application of additional plastic weave (netting). Swivel chairs (types 503, 505, 523) swivel thanks to a simple cast iron mechanism. Swivel is always accompanied by height change, as the swivel mechanism is not connected with mechanical control in these products. Maximum unscrewing and complete disconnection of the parts is prevented by a safety lock (metal stop). Please note that products supplied before the end of 2014 are not yet equipped with the safety lock

and therefore complete unscrewing (i.e. screwing over 68 cm), disconnection and fall may still occur. Please note that swivel chairs (type 503, 523) are designed for home use only; they do not comply with certification for office furniture.

Surfaces made of high-pressure laminate are extremely resistant to scratch, cigarette ash, temperatures up to 180 °C, standard liquids and alcohol. However, careful handling is always recommended.

Treatment of other parts

Remove dust from the cane parts regularly with a vacuum cleaner with fine suction force or comb the surface carefully with a soft brush. Wipe the cane from time to time with a slightly moistened white cotton cloth or buckskin to prevent excessive drying of the fibre by dry air in the room and let dry naturally. This treatment can be applied even if plastic netting is used under the natural cane weave.

Other parts of the product may be cleaned with standard cleaning detergents designed for the particular material (plastic, metal, glass etc.). When using any of these cleaners, follow the manufacturer's instructions and test the

product first on a less visible area. Severe staining may be removed with lukewarm water. Don't forget to wipe the surface dry with a soft cotton cloth. The cast iron swivel mechanism of chair types 503, 505, 523 does not need special lubrication. However, a one-time application of a very thin layer of silicone oil will do no harm. To prevent furniture or floor material damage, it is recommended to check the wear of glides every 6 months (particularly the felt and Teflon glides). Both the wood and the glass components of the Hoop bowl are handmade and require special care. The handcrafted glass bowl is fragile and therefore not recommended for washing in a dishwasher. The same guidance applies to the drinking glass in the Ripple set.

! Never use chemical solvents or removers (acetone, benzene, trichloroethylene) or abrasive cleaning paste for any other material of your product. As for laminated surface, never use polishes or oil- or wax-based products, as they might produce uneven glossy stains on the surface.

Product assembly and joint check

Follow the Assembly Instructions when assembling the purchased product. Assemble tables on a suitable soft surface. This will prevent mechanical damage to the table top. After completing the assembly, take the table out from the carton wrap and put it on legs. The table should be handled by the number of persons recommended in the Assembly Instructions. Otherwise you

might cause damage to the legs, the table top or the folding mechanism.

Regularly check and tighten all screws and bolts used for connections of the individual parts. This will increase the life and overall strength of the product. Increased clearance of the joints may result in excessive stress on parts and subsequent damage to the product.

! Do not sit or stand on the tables. All folding tables have castors, which allow them to be folded and unfolded easily. Do not use the castors to move the table (whether folded or unfolded). Given the table's weight, they may leave visible marks, particularly on wooden floors, but will not damage them.

Important information

After the end of the furniture service life treat it as waste, that is hand it over to an authorised waste disposal company for environmental disposal. Please follow all the instructions and recommendations contained herein. Regular professional care will extend the life of your product. In addition, professional care may be required for application of warranty claims. In case of your failure to follow the above-mentioned instructions and recommendations, the manufacturer takes no responsibility for potential damage caused by inappropriate use or handling of the product, such as, for example, standing or kneeling on seating furniture. Our products are intended exclusively for interior use, unless otherwise specified.

TON strives to continuously improve all its products. Therefore please note that changes of the used materials, structure or surface finish may occur at any time. This may also be connected with changes of instructions or recommendations for use of the products. Thank you for your understanding. We wish you pleasant moments with our products.
