Price list

SENAB

Färgmarkeringar och/eller symboler för hållbara alternativ i prislistan:

Mörkgrön markering eller symbol

Miljömärkt produkt – Möbler där hela den sammansatta varan har en typ 1 miljömärkning enligt ISO 14024 med Svanen, Möbelfakta, EU Ecolabel eller annan likvärdig märkning.

Ljusgrön markering eller symbol

Hållbarhetsmärkt produkt eller beståndsdel – Möbler där hela eller delar av den sammansatta varan är hållbarhetsmärkt, exempelvis med FSC, EU Ecolabel eller OEKO-TEX®. Leverantören ska kunna ge mer detaljerad information om vilka delar eller variationer som är hållbarhetsmärka vid begäran.

Orange markering eller symbol

Klimatberäknad produkt – Produkt med dokumenterad miljövarudeklaration (EPD) enligt ISO 14025.

Lila markering eller symbol

Produkt med återvunnet eller förnybart material (enligt definitionerna i ISO 14021). Leverantören ska kunna ge information om andel (%) återvunnet och/eller förnybart (biobaserat) vid begäran. Märkning av återvinningsbart material utgår.

Blå markering eller symbol

Demonterbar produkt – Produkt som är demonterbar till olika komponenter och beståndsdelar som i första hand möjliggör återbruk och i andra hand materialåtervinning när produkten nått sin fulla livslängd. Produkten ska vara designad för renovering, det vill säga att det ska vara enkelt att reparera och byta ut moduler, komponenter och beståndsdelar som slits över tid. Exempelvis ska ytskikt, som bordsskivor, textil och stoppning kunna tas isär, avlägsnas och ersättas med hjälp av vanligt förekommande manuella verktyg, ej specialverktyg. Enklare reparationer och utbytesarbeten ska kunna utföras av en lekman. Om det krävs fackmanakunskap för mer avancerade arbeten ska det framgå av anvisningarna som leverantören ska kunna ge vid begäran. Anvisningarna ska innehålla en sprängskiss, steg för steg beskrivning inklusive vilka verktyg som krävs samt hur möbelns ingående delar bör källsorteras.

Product

dimensioning

Dimensioning – Swivel chairs

1. Standard references

Measurements should be carried out in accordance with EN standards.

1.1. For swivel chairs:

EN 1335 –1:2000 / AC:2002 – Office furniture
– Office operative chair – Part 1: Dimensions -
dimension meaning

All dimensions are given in millimeters.

The given dimensions may vary depending on the selected product configuration (applies to optional components, e.g. type of upholstery, castors / glides, gas lift)

Definitions:

- “A” point – the point at which the chair axis of rotation intersects the seat loaded with a 64 kg heavy dummy,
- median plane (PLANE 1) – vertical plane passing through the “A” point and dividing the chair into two symmetrical parts,
- transverse plane (PLANE 2) – vertical plane perpendicular to the median plane, passing through the “A” point,
- “S” point – the most forward point of backrest lying in the median plane.

2. Swivel chairs

The measurement of swivel chairs is performed with the mechanism set in such a position that the seat is as horizontal as possible and the backrest is as vertical as possible.

Swivel chairs are measured on castors for soft floors.

A – Seat height

(according to “a” standard)
Seat height is the vertical distance between the ground and the “A” point of the chair.
For products with a gas lift, the measurement is performed with the minimum and maximum shock absorber extension.

B – Seat depth

(according to “b” standard)
Seat depth is the distance between the seat front edge and the vertical projection of “S” backrest points measured in the median plane.
For products with seat depth adjustment, the measurement is performed with the minimum and maximum seat extension.

C – Seat surface depth

(according to “c” standard)
Seat surface depth is the maximum distance between vertical lines passing through the front and rear edges of the seat, measured in the median plane.

D – Seat width

(according to “d” standard)
Seat width is the distance between the vertical lines passing through the seat side edges, measured in transverse plane.

E – Overall height

(not included in standard)
Overall height of the product measured in straight perpendicular line to the ground, from the ground to the backrest highest point. For products with a gas lift, the measurement is given with the minimum and maximum gas lift extension.

For products with height adjustable backrest, the measurement is given with the minimum and maximum position of backrest and gas lift.

For chairs in which the headrest is structurally an integral part of the backrest, the overall height should be given by taking into account the headrest.

F – Backrest width

(according to “i” standard)
Backrest width is the maximum distance between the backrest side edges.

G – Backrest length

(according to “g” standard)
Backrest length is the vertical distance between the top and bottom edges of backrest, measured in the median plane.

H – Backrest height

(according to “h” standard)
Backrest height is the vertical distance between the top edge of backrest and the “A” point, measured in the median plane.

In case of a product with height adjustable backrest, the measurement is given with the minimum and maximum backrest position.

I – Headrest height

(not included in standard)
Headrest height is the vertical distance between the top edge of headrest and the top edge of backrest, measured in the median plane. The headrest is positioned maximally in vertical position to the upper and lower edge of headrest. In case of a product with height adjustable headrest, the measurement is given with the minimum and maximum position of backrest.

Dimensioning – Swivel chairs

M – Headrest width

(not included in standard)

Headrest width is the maximum distance between side edges of headrest length.

N – Headrest height

(not included in standard)

Headrest height is the vertical distance between the upper and lower edges of headrest length.

J – Base diameter

(not included in standard)

Base diameter measured from the extreme outer points of five-star base.

K – Base width

(not included in standard)

For bases other than five-star bases, the dimension is given at the extreme points of the base. As shown in the picture below.

L – Overall depth

(not included in standard)

Measured at the extreme points of chair in the side view. In case the extreme points of chair are the chair base, dimension should be given by setting the base and castors as shown in the figure below.

For products with adjustable seat depth, measurement is performed at the minimum and maximum seat extension.

In case of chairs with armrests, additional dimensions are required:

Z – Armrest height

(according to “p” standard)

Armrest height is the vertical height between the top edge of the armrest and the “A” point. For armrests of non-horizontal shape, with rounded ends or non-rigid material, the armrest height is the distance between the horizontal plane, situated 20 mm below the highest point of the armrest, and the “A” point.

In case of a product with height adjustable armrests the measurement is given at the minimum and maximum position of armrest.

Y – Armrest length

(according to “n” standard)

Armrest length is the distance between the vertical lines passing through its front and rear edges. For armrests of non-horizontal shape, with rounded ends or non-rigid material, the distance is to be measured 20 mm below the usable area of the armrest.

In case of a product with adjustable armrest pad position, the measurement is given at the minimum and maximum extension of the pad.

X – Armrest width

(according to “o” standard)

Armrest width is the distance between the vertical lines passing through the inner and outer edges of the pad / handrail in front view.

If the shape of the armrest makes it impossible to measure the width, the measurement should be performed 20 mm below the top edge.

W – Internal width between armrests

(according to “r” standard)

Internal width is the distance between vertical lines passing through the inner edges of the armrests, measured in the transverse plane.

If internal width can be adjustable, the measurement should be performed at both extreme positions of the adjustable armrest components.

V – External width between armrests

(not included in standard)

Distance measured between vertical lines passing through the outer points of the armrests in the front view.

If there is a possibility of adjustment, the measurement should be performed at both extreme positions of the adjustable armrests.

Dimensioning – frame chairs

Definitions:

- median plane (PLANE 1) – vertical plane dividing the chair into two symmetrical parts,
- transverse plane (PLANE 2) – a vertical plane perpendicular to the median plane,
- “S” point – the most forward point of backrest lying in the median plane.

Dimensioning – frame chairs

3. Conference frame chairs

The measurement method does not refer to the standard measurement method according to PN-EN 16139.

Measurement of conference frame chairs performed on glides for soft floors.

A – Seat height

Seat height is the vertical distance between the ground and the highest point of seat measured at the front edge in the median plane of the product.

A1 – Seat height according to standard PN-EN 16139.

Seat height is the vertical distance between the ground and the seat point measured in the median plane with a designated template in accordance with the EN standard.

B – Seat depth

Seat depth is the distance between the seat front edge and the “S” point.

For products with seat depth adjustment, the measurement is given with the minimum and maximum seat extension.

For some chairs with one-piece shell, in which there is no clear borderline between seat and backrest, depth is measured from half of the arch between the seat and backrest.

C – Seat surface depth

Seat surface depth is the maximum distance between the vertical lines passing through the front and rear edges of the seat, measured in the median plane. For products with seat depth adjustment, the measurement is given at the minimum and maximum seat extension. For some chairs with one-piece shell, in which there is no clear borderline between seat and backrest, depth is measured from half of the arch between the seat and backrest. If C dimension is identical to B dimension, only one is given.

D – Seat width

Seat width is the distance between the vertical lines passing through the seat side edges measured in the transverse plane.

E – Overall height

Overall product height measured perpendicular to the ground, from the ground to the highest point of the product.

F – Backrest width

Backrest width is the maximum distance between the side edges of the backrest.

G – Backrest length

Backrest length is the vertical distance between the top and bottom edges of the backrest measured in the median plane.

H – Armrest height

Armrest height is measured perpendicular to the ground, from the ground to the highest point of the armrest.

K – Base width

Measurement at the extreme points of the base.

V – Overall width

Distance measured between the points of the chair, which are the most distant from each other in the transverse plane.

L – Overall depth

Measurement at the extreme points of the product.

2. Materials/Versions

2.1. Base

Bases:

- Ø 710 mm five-star black polyamide (TS36),
- Ø 710 mm five-star light grey polyamide (TS36-G),
- Ø 710 mm five-star polished aluminium with chrome effect (ST64-POL).

2.2. Castors

- Ø 60 mm black plastic self-braking castors for soft floors (ESH60) as standard, or hard floors (ESH60-G) as an option.
- Ø 60 mm light grey plastic self-braking castors for soft floors (ESH60-G) or hard floors (ESH60-G), as an option.

2.3. Mechanisms

SA2-ST synchronous mechanism – functions:

- free-floating – synchronous backrest and seat tilt,
- backrest tilt angle of 21° synchronised with seat tilt angle of 7°,
- backrest multi-lock in 4 positions,
- automatic backrest tilt force adjustment to user’s weight– 3 turns fast adjustment,
- seat depth adjustment 60 mm, multi-lock in 7 positions,
- Anti-Shock – a feature that controls chair backrest to avoid hitting user’s back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

ER-ST advanced synchronous mechanism

– functions:

- free-floating – synchronous backrest and seat tilt,
- backrest tilt angle of 23° synchronised with seat tilt angle of 10°,
- backrest multi-lock in 5 positions,
- backrest tilt force adjustment in 7 positions with a knob placed on right side of the seat,
- seat depth adjustment 60 mm, multi-lock in 7 positions,
- negative seat inclination in range of 2°, synchronously tilting with the backrest at 5°, which guarantees optimal support for the user’s back at each tilted position of the chair – as an option (ERN-ST),
- Anti-Shock – a feature that controls chair backrest to avoid hitting user’s back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

2.4. Seat, backrest and headrest

Seat

Upholstered seat – seat structure and cover made of polypropylene (PP) covered with injected foam, thickness 59 mm and density 55–60 kg/m³.

Pocket springs placed inside injected foam as an option (SE-SP).

Finishes not available: Kaiman, Rivet, Remix 3, Silvertex, Valencia

Upholstered seat with side drops – seat structure and cover made of polypropylene (PP) covered with injected foam, thickness 59 mm and density 55–60 kg/m³.

Side drops upholstered in the same type of fabric as seat as an option (SE-DE).

Pocket springs placed inside injected foam as an option (SE-SD-SP).

Only available in finishes: Kaiman, Rivet, Remix 3, Silvertex, Valencia

Backrest

Upholstered backrest (UPH) – frame made of black or light grey glass fiber reinforced polyamide (PA + GF) with following layers inserted into frame grooves:

- supporting material – Runner 3D fabric (colour always matching frame colour: RN60999 for black frame and RN60165 for light grey frame),
- upholstery with cut foam, thickness 10 mm and density 25 kg/m³.

Mesh backrest (MESH) – frame made of black or light grey glass fiber reinforced polyamide (PA + GF)

Two types of mesh available:

- MV – semi-transparent
- MC – 3D mesh
- MF, RN - fabric 3D

Manual lumbar support (LUH2) – made of black or light grey thermoplastic elastomer (TPE), with height adjustment in range of 55 mm. Lumbar support colour matches backrest frame finish.

Headrest

Adjustable, upholstered headrest with cover (HRUA3).

Structure made of polypropylene (PP), covered with injected foam, thickness 50 mm, density 55–60 kg/m³. Headrest cover made of black or light grey polypropylene (PP).

Headrest supporting element made of black or light grey glass fiber reinforced polyamide (PA + GF).

Adjustment range:

- height adjustment 100 mm,
- lock in 11 positions,
- depth adjustment 20 mm,
- headrest pad rotation 70°.

Headrest cover and supporting element colour matches backrest frame finish.

3. Armrests

2-D armrests (R70) – armrest bar made of black glass fiber reinforced polyamide (PA + GF), structure made of black or light grey glass fiber reinforced polyamide (PA + GF), armrest pad made of black soft polyurethane (BPU).

Adjustment range of the armrests: height 80 mm, side movement of the armrests 70 mm.

3-D armrests (R71) – armrest bar made of black glass fiber reinforced polyamide (PA + GF), structure made of black or light grey glass fiber reinforced polyamide (PA + GF), armrest pad made of black soft polyurethane (BPU).

Adjustment range of the armrests:

- height 80 mm,
- side movement of the armrests 70 mm,
- forward/backward movement of the pad 70 mm and pad rotation 30° inward.

4. Packaging

Chair partially assembled, compact packaging suitable for being shipped by courier (PACK-A1)

– 1 piece per box, 8 pieces on pallet – as standard.

The box contains:

- seat with assembled mechanism and armrests,
- backrest,
- headrest (in version with headrest),
- base,
- castors,
- gas lift.

Partially assembled chair (PACK-L) – 1 piece per box, 6 pieces on pallet – as an option.

The box contains 3 elements:

- seat with assembled mechanism, backrest and armrests,
- base with assembled castors,
- gas lift.

Fully assembled chair (PACK-ASM) – 1 piece per box, 4 pieces on pallet – as an option.

5. Technical regulations, approvals and quality marks for the chairs (for selected product configurations)

- GS safety certificate,
- Ergonomics tested.

6. Colour concept

- 1 Headrest cover
- 2 Headrest supporting element
- 3 Backrest frame

Black version (CC-B) – elements in black:

- headrest cover and headrest supporting element,
- backrest frame,
- lumbar support,
- armrest pad and armrest structure,
- base.

Options – elements in polished aluminium:

- base.

- 4 Lumbar support
- 5 Armrest structure
- 6 Base

Light grey version (CC-G) – elementy w kolorze jasnoszarym:

- headrest cover and headrest supporting element,
- backrest frame,
- lumbar support,
- armrest structure,
- base.

Options – elements in black:

- base,
- armrest structure.
- Elements in polished aluminium:
- base.

2. Materials / Versions

2.1. Base

Bases:

- Ø 710 mm five-star black polyamide (TS25),
- Ø 700 mm five-star polished aluminium with chrome effect (ST44-POL).

2.2. Castors

Ø 65 mm black plastic self-braking castors for soft floors (ESH) as standard, or hard floors (ESHH) as an option.

2.3. Mechanisms

FS Synchronous mechanism – functions:

- free-floating – synchronous backrest and seat tilt,
- backrest tilt angle of 20° synchronised with the seat tilt angle of 11°,
- backrest multi-lock in 5 positions,
- backrest tilt force adjustment with a knob,
- seat depth adjustment 50 mm – as an option (FST),
- Anti-Shock – a feature that controls chair backrest to avoid hitting user's back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

LP11 Synchronous mechanism – functions:

- free-floating – synchronous backrest and seat tilt,
- backrest tilt angle of 23° synchronised with the seat tilt angle of 11°,
- backrest multi-lock in 5 positions,
- backrest tilt force adjustment with a knob placed on the right side of seat,
- seat depth adjustment 60 mm, multi-lock in 6 positions – as an option (LP11T),
- negative seat inclination of – 3°, synchronously tilting with the backrest at 6°, which guarantees optimal support for the user's back at each tilted position of the chair – as an option (LP11TN),
- Anti-Shock – a feature that controls the backrest to avoid hitting user's back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

EAST Advanced Asynchronous mechanism

- functions:
- free-floating – backrest tilt,
- backrest tilt angle in range of – 10° up to + 25°,
- seat tilt angle in range of – 5° up to + 5°,
- seat depth adjustment 60 mm,
- backrest multi-lock in 5 positions,
- backrest tilt force adjustment with a crank placed under the seat,
- Anti-Shock – a feature that controls chair backrest to avoid hitting user's back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

2.4. Seat, backrest and headrest

Seat

Structure is made of 7-layer plywood, thickness 10.5 mm, covered with injected foam, thickness 52–71 mm, density 52 kg/m³.

AirCare system (AIC) – based on ergonomic technology of seat which dynamically adjusts to user's body movements.

It consists of air chambers that ensure biodynamic seat and support user's spine.

Backrest

As standard, each backrest is height adjustable in range of 70 mm, 13 lock positions.

High upholstered backrest (HB UPH) – structure is made of 8-layer plywood, thickness 12 mm, covered with injected foam, thickness ≈ 35 mm, density 60 kg/m³.

Middle upholstered backrest (MB UPH) – structure is made of 8-layer plywood, thickness 12 mm, covered with injected foam, thickness ≈ 35 mm, density 70 kg/m³.

Low upholstered backrest (LB UPH) – structure is made of 8-layer plywood, thickness 12 mm, covered with injected foam, thickness ≈ 35 mm, density 70 kg/m³.

Backrest connector – made of flat steel bar, thickness 8 mm.

Manual lumbar support (LSD2) – integrated with upholstered backrest, with depth adjustment by knob in range of 20 mm – Schukra mechanism.

Headrest

Upholstered headrest (HRUA) – structure is made of polystyrene (PS), covered with cut foam, thickness 15 mm, density 40 kg/m³, fully upholstered. Tilt angle and height adjustment in range of 75 mm.

3. Armrests

2-D armrests – made of black polyamide (PA) with black soft polyurethane (PU) pads. Adjustment range of the armrests: height 80 mm, side movement of the armrests ± 25 mm.

3-D armrests – made of black polyamide (PA) with black soft polyurethane (PU) pads. Adjustment range of the armrests: height 80 mm, side movement of pads ± 15 mm, forward/backward movement of the pad ± 25 mm.

4-D armrests – made of black polyamide (PA) with black soft polyurethane (PU) pads. Adjustment range of the armrests: height 80 mm, side movement of the armrests ± 25 mm, forward/backward movement of the pad ± 20 mm, pad rotation ± 30°.

4. Packaging

Chair unassembled, 1 piece per box, 10 pieces on pallet – as standard (not applicable to the version with R42U1-SB2 and R42U3-SB2 armrests).

Chair partially assembled, 1 piece per L-shape box, 5 pieces on pallet – as an option.

The cardboard contains 3 separate elements:

- assembled seat with the mechanism, backrest and armrests,
- base with assembled castors,
- gas lift.

5. Technical regulations, approvals and quality marks for the chairs (for selected product configurations)

GS safety certificate.

2. Materials / Versions

2.1. Base

Bases:

- Ø 711 mm five-star black polyamide (TS34),
- Ø 711 mm five-star polished aluminium with chrome effect and partially powder-coated in Jet black RAL 9005 colour underneath (ST61-POL/BL).

2.2. Castors

Ø 65 mm black plastic self-braking castors for soft floors (ESH) as standard, or hard floors (ESHH) as an option.

2.3. Mechanisms

- LP11-ST synchronous mechanism** – functions:
- free-floating – synchronous backrest and seat tilt,
 - backrest tilt angle of 22° synchronised with the seat tilt angle of 11°,

- backrest multi-lock in 5 positions,
- backrest tilt force adjustment with a knob placed on right side of the seat,
- seat depth adjustment 80 mm – function integrated with seat,
- Anti-Shock – a feature that controls chair backrest to avoid hitting user's back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

ERN-ST advanced synchronous mechanism

- functions:
 - free-floating – synchronous backrest and seat tilt,
 - backrest tilt angle of 23° synchronised with the seat tilt angle of 10°,
 - backrest multi-lock in 5 positions,
 - backrest tilt force adjustment in 7 positions with a knob placed on the right side of the seat,
 - seat depth adjustment 80 mm, possible seat multi-lock in 11 positions,
 - negative seat inclination of 2°, synchronously tilting with the backrest at 5°, which guarantees optimal support for the user's back at each tilted position of the chair
- Anti-Shock – a feature that controls chair backrest to avoid hitting user's back after releasing the lock,
- smooth height adjustment of chair with pneumatic gas lift.

2.4. Seat, backrest and headrest

Seat

Structure is made of polypropylene (PP) covered with injected foam, thickness 59 mm, density 55–60 kg/m³.

AirCare system (AIC) – based on ergonomic technology of seat which dynamically adjusts to user's body movements.

It consists of air chambers that ensure biodynamic seat and support user's spine.

Backrest

As standard, each backrest is height adjustable in range of 70 mm, 13 lock positions.

High backrest (HB UPH) – structure is made of 8-layer plywood, thickness 12 mm, covered with injected foam, thickness ≈35 mm, density 60 kg/m³.

Low backrest (LB UPH) – structure is made of 8-layer plywood, thickness 12 mm, covered with injected foam, thickness ≈35 mm, density 70 kg/m³.

Backrest connector – made of flat steel bar, thickness 8 mm.

Manual lumbar support (LSD2) – integrated with upholstered backrest, with depth adjustment by knob in range of 20 mm – Schukra mechanism.

Headrest

Upholstered headrest (HRUA) – structure is made of polystyrene (PS), covered with cut foam, thickness 15 mm, density 40 kg/m³, fully upholstered. Tilt angle and height adjustment in range of 75 mm.

3. Armrests

2-D armrests – made of black polyamide (PA) with black soft polyurethane (PU) pads. Armrest bar is made of black plastic or polished aluminium with chrome effect. Adjustment range of the armrests: height adjustment 100 mm, side movement of the armrests 37.5 mm to one side.

4-D armrests – made of black polyamide (PA) with black soft polyurethane (PU) pads. Armrest bar is made of black plastic or polished aluminium with chrome effect. Adjustment range of the armrests: height adjustment 100 mm, side movement of the armrests 37.5 mm to one side, forward/backward movement of the pad ± 30 mm, pad rotation ± 30°.

4. Packaging

Chair partially assembled (PACK-L) – 1 piece per L-shape box, 5 pieces on pallet – as standard.

The cardboard contains 3 separate elements:

- assembled seat with mechanism, backrest and armrests,
- base with assembled castors,
- gas lift.

5. Technical regulations, approvals and quality marks for the chairs (for selected product configurations)

GS safety certificate.
Möbelfakt certificate (pending).

terms of product use,
maintenance and cleaning

General Business Conditions

General terms of product use, maintenance and cleaning

We entrust you with products that meet the highest standards and requirements, translating directly into their long-term and reliable use. For your complete satisfaction, please refer to the terms of proper use, maintenance and cleaning of our products.

By following the guidelines provided below you can enjoy the highest quality of our products not only within the warranty period, but also for many years to come. Please keep in mind that all products must always be used for their intended purpose.

Note: If improperly used, maintained or cleaned, furniture will wear much faster. Damage caused to a piece of furniture as a result of non-observance of these guidelines provides basis for rejection of any complaints.

1. General

Packaging and transport

Our products are packaged very carefully, to ensure they are protected from damage. Be careful when opening packages, as the use of sharp objects may damage the furniture. Products in transport and storage should always be handled in accordance with indications on their packaging, eg. fragile etc. (if applicable). Dents and irregular folds on upholstered furniture usually occur due to handling. The problem is normally resolved after no later than a several of days from unpacking. In case of damage to new products, it is recommended that you keep the packaging to help us verify the legitimacy of your claim.

Assembly

For a product to be safely used for a long time it is necessary to have it assembled correctly, i.e. in accordance with guidelines provided in the assembly instruction for the product (which specifies the assembly method, the number of components and the tools needed for assembly), and later used in line with operating instructions and the guidelines that follow.

After assembly

- furniture needs to be set evenly and levelled (failure to do so may cause malfunction of drawers and deformation of the furniture);
- for chairs, use of appropriate castors/glides is recommended (depending on the type of surface – soft or hard), otherwise the floor can be damaged. The Manufacturer does not bear responsibility for damage to flooring caused by improper use of products. For wooden floors, protective mats may be helpful too. It is also important to keep the floor clean, because dirt may stick or become absorbed by castors/glides, which can cause damage to the floor;
- stackable conference chairs should not be stacked higher than stated in the specific product's operating instructions (safety reasons, risk of damage to products);
- repair or replacement of a gas lift can be carried out only by qualified staff. **Note:** It is dangerous to disassemble, dismantle or heat up a gas lift, and doing so may lead to its damage and oil spills.

Optimal conditions for use

- Furniture should be used indoors and should be protected from adverse weather conditions. It is recommended that ambient conditions should be optimal, i.e.:
 - air temperature of 15–30 °C, relative air humidity of 40–65 % (both, too dry and too humid air can cause deformation of components),
 - it is recommended that rooms should be aired regularly.
- Furniture must not be placed or stored directly next to heat sources such as heaters, radiators, fan heaters etc. Place furniture at a distance of no less than 1 m from active sources of heat.
- Furniture surfaces should be specially protected from direct heat (such as items with a temperature higher than 40 °C). Avoid placing furniture in rooms with high humidity, or on a wet surface (furniture may absorb water).
- Furniture must not be exposed to direct sunlight. Prolonged exposure of a product to UV radiation may lead to discolouration.

Loading capacity

Furniture must be used for its intended purpose. Do not sit, stand or walk on its surface, if not designed for that purpose. Doing so may result in an accident or damage to furniture components. It is not recommended to overload furniture in excess of its maximum loading capacity. Please exercise special caution when placing a heavy object on furniture, as it may easily damage the surface. Upholstered furniture is particularly prone to deformation and denting.

Surface scratches

Furniture can be easily damaged by objects with sharp or coarse surfaces, so never place or move such objects over product surface. Use of mouse pads and mats placed under a keyboard or other equipment which could potentially damage desktop surface is recommended. Resting user's shoes on swivel chair base during use is not recommended.

Chemical substances

Use isolating mats when working with chemical substances (liquids, alcohol, nail polish removers, solvents etc.). Any spilt liquids must be wiped off immediately with a soft absorbent cloth. Avoid contact of lacquered surfaces with skin care cosmetics (creams, lotions etc.).

Operation

- a chair is intended to be used by one person at a time (with a body weight of no more than 110 kg¹, as specified by the standard, for no longer than 8 hours per day²);
- a sofa is intended to be used by the number of people the given model is designed for or fewer (e.g. a 3-seater sofa must not be used by more than three people at a time);
- screw connections in furniture may become loose during usage; loose connections must be fixed immediately by tightening the appropriate screws and connectors. It is recommended that screw connections are checked regularly (once every six months) and tightened, if necessary.

Moving furniture

The most convenient way to move a piece of furniture is to hold it by its vertical walls. It is not recommended to hold furniture by fittings, handles or small upholstered parts (such as headrest) not intended for carrying, as this can damage the product; lift a desk or table by holding its supporting structure, not its desktop. Move fixed furniture by lifting it up – sliding may cause damage to the furniture or the floor. Before moving cabinets, remove their contents and lock doors and drawers. At least two people are required to move a piece of fixed furniture, unless stated otherwise in the assembly instruction. Mobile furniture can be moved by one person. To move modular seats forming a set, first detach all components of the set.

By moving individual components of a system separately you make sure they stay undamaged. It is recommended that a piece of furniture should be re-levelled after it has been moved.

2. Detailed terms of use, cleaning and maintenance of furniture

Melamine faced chipboard (MFC)

Due to its characteristics, melamine faced chipboard is very often used to produce office furniture. It has good mechanical properties and it is scratch and stain-resistant. To clean MFC, simply use a moist, soft cloth. For greater stains, add a mild detergent, e.g. soap or dishwashing liquid to water. After cleaning, wipe the surface with a dry cloth. Do not use steam cleaning devices. Remove dirt immediately. Long exposure can cause permanent damage to the surface.

Use:

- furniture needs to be set evenly and levelled (failure to do so may cause malfunction of drawers and deformation of the furniture);

Cleaning and maintenance:

- clean with a moist cloth,
- a gentle detergent is acceptable (e.g. soap or dishwashing liquid),
- DO NOT use aggressive detergents, (for cleaning and polishing), bleaching agents, acid and acid salts based detergents,
- wipe with a dry cloth,
- DO NOT use steam cleaning devices.

Laminates

Laminates are used in furniture products intended for heavy use. They are characterized by high resistance to abrasion and temperatures.

The antistatic surface prevents dirt and dust from sticking. Laminates should be cleaned with a moist cloth. For larger stains, a gentle detergent can be used. After laminate surface is cleaned, it should be wiped with a dry cloth.

Use:

- temperatures of 15–30 °C air humidity of 40–65 %,
- at least 1 m distance from active sources of heat,
- protect from direct sunlight,
- do not exceed the maximum loading capacity.

Cleaning and maintenance:

- clean with a moist cloth,
- gentle detergent is allowed,
- wipe with a dry cloth.

¹ Not applicable to chairs approved for use by user of weight up to 150 kg.

² Not applicable to chairs dedicated for 24 / 7 use.

General terms of product use, maintenance and cleaning

FENIX NTM

FENIX NTM surfaces have a unique non-porous external layer, allowing you to keep it neat with simple, everyday care and cleaning methods. The surface should be cleaned regularly. Almost all regular household cleaning products can be safely used. For the most common stains, you can simply clean the surface with warm water using a non-abrasive cloth. Tougher stains can be removed with non-abrasive household cleaners or solvents. For older, dried or caked-on stains, use a magic sponge or soft cloth to remove them. After using any solvents, we recommend rinsing the surface with warm water and a detergent.

Always rinse thoroughly to remove the detergent with clean water, preferably warm.

Use:

- at least 1 m distance from active sources of heat,
- use mats under hot dishes,
- do not exceed the maximum load bearing capacity.

Cleaning and maintenance:

- clean with perfectly clean soft cloth,
- marks may be removed by rinsing with hot water,
- wipe dry gently after cleaning,
- never use abrasive cleaners, strongly acidic or alkaline products, bleach and heavily-chlorinated products.

To clear micro-scratches:

1. With an iron:
 - a. place a dampened sheet of kitchen roll over the area where, the micro-scratches can be seen,
 - b. place the hot iron on the surface, that needs repairing. Do not leave the iron on the surface for more than 10 seconds at a time,
 - c. rinse the repaired area with lukewarm water and a microfiber cloth.
2. With magic sponge:
 - a. Rub the magic sponge on the area where the micro-scratches can be seen. The sponge can be used dry or slightly damp. Protect from deep scratching and other mechanical damage.

Linoleum

Linoleum is a fully organic and decorative furniture finish. The coating is matte, pleasant and natural to the touch. The antistatic surface prevents dirt and dust from sticking. Small colour variations in furniture from various deliveries are unavoidable and show the natural origin of the materials. Linoleum surface should be cleaned with a moist cloth. For larger stains, a pH-neutral detergent can be used. Use of mats under flower pots, vases or dishes is recommended. Stains from ink, coffee, tea and red wine must be removed immediately. They should be removed using a clean cloth and an alcohol (ethanol)based product. Do not use cleaning or conditioning agents which contain silicone and wax derivatives or abrasive substances. Avoid the use of furniture cleaning and conditioning chemicals which may result in stains or persistent streaks on the surface of linoleum.

Use:

- temperatures of 15–30 °C air humidity of 40–65 %,
- avoid contact with water,
- at least 1 m distance from active sources of heat,
- use mats under hot dishes,
- protect from direct sunlight,
- do not exceed the maximum loading capacity.

Cleaning and maintenance:

- clean with a moist cloth,
- pH-neutral detergent is allowed,
- stains from coffee, tea etc. should be removed with an alcohol-based product,
- do not use cleaning agents containing silicones and waxes.

Lacquered MDF boards

Lacquered MDF boards should be dusted with a dry, soft cloth. For more difficult stains use a moist cloth. Do not use cleaning or conditioning agents containing silicone and wax derivatives, abrasive substances or solvents (such products may cause permanent damage to furniture surface).

Use:

- temperatures of 15–30 °C air humidity of 40–65 %,
- avoid contact with water,
- at least 1 m distance from active sources of heat,
- use mats under hot dishes,
- protect from direct sunlight,
- do not exceed the maximum load bearing capacity.

Cleaning and maintenance:

- dust with a dry, soft cloth,
- clean with a moist cloth,
- do not use cleaning agents containing silicones, waxes, abrasives or solvents.

Topalit®

Topalit® table tops are characterized by exceptional resistance to high temperatures, scratching, changeable weather conditions and of high loading capacity. They are relatively easy to keep clean. Topalit® table tops should be cleaned with a soft sponge or cloth using warm water with dishwashing liquid. After washing, wipe the top with a dry cloth. Repeat if necessary. When leaning Topalit® table tops, do not use sharp materials/scourers or acid-based detergents.

Use:

- resistant to high temperatures, scratching,

Cleaning and maintenance:

- clean with a moist sponge or cloth using warm water with dishwashing liquid,
- wipe with a dry cloth,
- for considerable stains, a stronger detergent can be used.

Solid wood, plywood, veneer (finished with lacquers or enamels)

Furniture made from solid wood, plywood and veneer shows the natural beauty and structure of the material used. Natural variations in the look of individual components of a piece of furniture or between furniture sets are acceptable, making every product different, unique and original. They show the natural origin of the material, which additionally emphasizes the value of a piece of furniture

made with these materials. The surfaces of such furniture should be dusted with a clean, moist cloth, moving along the grain. Then, the surface should be dried immediately by wiping with a dry cloth. Do not use cleaning or conditioning agents which may contain silicone and wax derivatives, abrasive substances or solvents. Avoid using chemical furniture cleaning and conditioning detergents as those may have adverse effect on the look of lacquer coatings, leading to permanent damage of the surface, for which the manufacturer bears no liability.

Use:

- temperatures of 15–30 °C air humidity of 40–65 %,
- avoid contact with water,
- at least 1 m distance from active sources of heat,
- do not place hot dishes on furniture,
- protect from direct sunlight,
- do not exceed the maximum loading capacity,
- avoid contact of surfaces with skin care cosmetics (creams, lotions etc.).

Cleaning and maintenance:

- clean with a moist cloth, moving along the grain direction,
- do not use cleaning agents containing, silicones, waxes, abrasives or any kinds of solvents,
- dry with a dry cloth.

Glass surfaces

Glass is an extremely durable material, but it requires proper care. Avoid moving objects made from hard materials (e.g. ceramics or metal) on glass surfaces, as they can scratch the surface of the glass. Glass is prone to rapid changes of temperature, therefore insulating mats should be placed under hot dishes. Glass components should be cleaned with a soft cloth and special glass cleaning products.

Use:

- protect from scratching,
- do not place hot dishes on glass surfaces,
- do not hit with hard objects.

Cleaning and maintenance:

- clean with a soft cloth,
- gentle detergent is allowed.

Metal surfaces: powder-coated, chromium plated, polished

In the process of powder coating, a special powder paint is evenly distributed (sprayed) on a metal surface. The coating is extremely smooth and durable, but it is not resistant to scratching or other kinds of mechanical damage (its function is more of a decorative nature, the same as chromium plated and polished surfaces, however, they have higher anti-scratch properties). After washing, wipe the metal surface of furniture dry. Metal elements should be cleaned with generally available non-scratching detergents intended for this type of finishes. The surfaces of furniture should be cleaned with a soft cloth.

Use:

- protect from scratching and other mechanical damage.

Cleaning and maintenance:

- clean with a soft cloth,
- generally available, non-scratching cleaning products.

General terms of product use, maintenance and cleaning

Plastic elements

Plastic elements are normally resistant to chemicals and moisture, but sensitive to strongly oxidizing agents and high temperatures; plastic components should not be exposed to strong sunlight, frost or heavy rain. They should be cleaned with warm water with an addition of generally available detergents such as soap or dishwashing liquid. Do not use sharp or abrasive sponges, brushes or scouring pads.

Use:

- temperatures of 15–30° C protect from scratching.

Cleaning and maintenance:

- clean with a soft cloth.
- generally available, non-scratching cleaning products.

Thermoformed felt

Building sound absorbing structures is one of the many uses of felt. Felt is rigid, yet pleasant to the touch. Product components made from thermoformed felt should be vacuumed regularly and cleaned with a soft, moist cloth with no detergents, if necessary.

Use:

- avoid: frequent rubbing and touching other objects against felt, sudden changes of temperature and soaking.

Cleaning and maintenance:

- regular vacuuming and/or cleaning with a soft brush,
- soft, moist cloth,
- do not use detergents.

Leather, imitation leather

If properly cared of, leather products can be preserved in a perfect condition for many years. Leather/imitation leather should not be soaked, greased or treated with abrasive agents; they should always be protected from direct sunlight. All stains should be removed immediately. Leather/imitation leather should first be cleaned with a cloth slightly moistened with a mild cleaning solution of water and soap. Then, the surface should be wiped dry delicately. Use of vacuum cleaner is not recommended as it may scratch the surface of leather/imitation leather. If special leather/imitation leather care products are used, it is recommended to carry out a test on an unseen part of upholstery first to check if it does not cause any damage to the surface.

Use:

- do not soak or grease,
- protect from scratching (do not use vacuum cleaner),
- protect from direct sunlight.

Cleaning and maintenance:

- clean with a soft cloth,
- mild cleaning solution of soap and water,
- wipe dry gently after cleaning.

Fabrics

Furniture with upholstery must always be protected against direct sunlight to avoid fading of fabrics. All stains should be removed immediately. When removing stains and dirt from upholstery, it is recommended to use a moist cloth soaked with warm water or delicate cleaning products/shampoos, dedicated to the particular type of stains. The effect of a detergent should be tested on a piece of an unseen area of upholstery first, before cleaning. Upholsteries must be vacuumed regularly.

Use:

- protect from UV radiation
- all stains should be removed immediately.

Cleaning and maintenance:

- clean with a soft, moist cloth soaked with warm water with an addition of a delicate cleaning agent/shampoo dedicated to furniture upholstery,
- vacuum regularly.
